The abrupt shift to online learning brought on by the COVID-19 pandemic revealed the need for the adoption and application of new media, virtual training, and online skill development for the modern workforce. However, organizations are grappling with unanticipated complexities, and many have recognized the gaps between online and in-person competencies and capabilities with unaddressed needs. There is an urgent need to bridge this gap and organically grow engagement and connectedness in the digital online space with new media tools and resources. The Handbook of Research on New Media, Training, and Skill Development for the Modern Workforce exhibits how both business and educational organizations may utilize the new media computer technology to best engage in workforce training. It provides the best practices to aid the transition to successful learning environments for organizational skill development and prepare and support new media educational engagement as the new norm in all its forms and finer nuances. Covering topics such as occupational performance assessment, personal response systems, and situationally-aware human-computer interaction, this major reference work is an essential tool for workforce development organizations, business executives, managers, communications specialists, students, teachers, government officials, pre-service teachers, researchers, and academicians.

Cognitive science is a multidisciplinary science concerned with understanding and utilizing models of cognition. It has spawned a great deal of research on applications such as expert systems and intelligent tutoring systems, and has interacted closely with psychological research. However, it is generally accepted that it is difficult to apply cognitive-scientific models to medical training and practice. This book is based on a NATO Advanced Research Workshop held in Italy in 1991, the purpose of which was to examine the impact of models of cognition on medical training and practice and to outline future research programmes relating cognition and education, and in particular to consider the potential impact of cognitive science on medical training and practice. A major discovery presented in the book is that the research areas related to artificial intelligence, cognitive psychology, and medical decision making are considerably closer, both conceptually and theoretically, than many of the workshop participants originally thought.

This volume collects the papers presented at the 2005 Annual General Assembly and Conference of the International Association of Maritime Universities (IAMU), which was held in Malmo, Sweden from 24 to 26 October 2005, and hosted by the World Maritime University. Section 1 presents interim and final reports on several research projects funded by IAMU. Section 2 presents a broad range of academic papers on the theme of maritime Security and MET. These range from the challenges faced by MET institutions worldwide in incorporating the new topic of maritime security into their syllabi, to the economic costs of the new maritime security regime to the shipping industry and to ports. Other topics are also covered, including the technical means of monitoring the movements of ships, and the social implications for seafarers on board ships. Section 3 includes papers on a variety of current MET issues, such as bridge resource management, quality management in MET, careers at sea, and ship handling and marine engineering simulators.
