Successful implementation of response to intervention (RTI) for academic skills problems requires rigorous progress monitoring. This book shows how the proven instructional technology known as precision teaching (PT) can facilitate progress monitoring while building K-12 students' fluency in reading, writing, math, and the content areas. Detailed instructions help general and special education teachers use PT to target specific skills at all three tiers of RTI, and incorporate it into project-based learning. Of crucial importance for RTI implementers, the book provides explicit procedures for measuring and charting learning outcomes during each PT session, and using the data to fine-tune instruction. Reproducible charts and other useful tools can be downloaded and printed in a convenient 8 1/2" x 11" size.

This comprehensive interactive CD-ROM resource profiles the articulation ability of a client, identifies areas in particular need of treatment and provides the material and tools to create tailor-made practice worksheets. This easy-to-use CD-ROM generates word lists according to the linguistic and phonetic criteria defined by the therapist. Words can also be added to the Library by the therapist allowing it to grow over time and to store a large number of words for articulation practice. Tailor-made lists of practice words and sentences, as well as pictures and instructions, can be designed and printed for individual clients or students. There are seven levels of articulation practice in the order of single sounds; consonant-vowel combinations; DDK rates; short words; multisyllabic words; short phrases with the target sound in one word; and longer sentences saturated with the target sound. The work includes an articulation screening test using words not in the Library to indicate the areas of greatest difficulty and to assess the generalisation of articulation skills. This versatile resource can be used with adults or children and will be invaluable to speech language therapists, teachers, and students of phonetics.

Elements of Language Maupin House Publishing, Inc.
Is literacy a social and cultural practice, or a set of cognitive skills to be learned and applied? Literacy researchers, who have differed sharply on this question, will welcome this book, which is the first to address the critical divide. The authors lucidly explain how we develop our abilities to read and write and offer a unified theory of literacy development that places cognitive development within a sociocultural context of literacy practices. Drawing on research that reveals connections between literacy as it is practiced outside of school and as it is taught in school, the authors argue that students learn to read and write through the knowledge and skills that they bring with them to the classroom as well as from the ways that literacy is practiced in their own different social communities. The authors

argue that until literacy development can be understood in this broader way educators will never be able to develop truly effective literacy instruction for the broad range of sociocultural communities served by schools.

Reading, Grade 2 Evan-Moor Educational Publishers

This must-read book for all literacy educators illuminates the intersection of research on literacy instruction and teacher evaluation. Since 2009, 46 states have changed or revised policies related to evaluating teachers and school leaders. In order for these new policies to be used to support and develop effective literacy instruction, resources are needed that connect the best of what is known about teaching literacy with current evaluation policies and support practices. A major contribution to meeting this need, the volume brings together a range of perspectives on tools, systems, and policies for the evaluation of teaching, organized into two sections: • Crafting Systems and Policies for Evaluating Literacy Instruction • Examples of Alternative Systems/Approaches for Evaluating Literacy Instruction Across the text, expert scholars in the field emphasize the need for literacy professionals to do more than merely apply generic observation instruments for teacher evaluation, but also to consider how these tools reflect professional values, how elements of effective literacy instruction can be unearthed or included within them, and how teacher evaluation systems and policies can be used to increase students' opportunities to develop literacy.
