Is literacy a social and cultural practice, or a set of cognitive skills to be learned and applied? Literacy researchers, who have differed sharply on this question, will welcome this book, which is the first to address the critical divide. The authors lucidly explain how we develop our abilities to read and write and offer a unified theory of literacy development that places cognitive development within a sociocultural context of literacy practices. Drawing on research that reveals connections between literacy as it is practiced outside of school and as it is

taught in school, the authors argue that students learn to read and write through the knowledge and skills that they bring with them to the classroom as well as from the ways that literacy is practiced in their own different social communities. The authors argue that until literacy development can be understood in this broader way educators will never be able to develop truly effective literacy instruction for the broad range of sociocultural communities served by schools.

Evaluating Literacy

Instruction Penguin

This must-read book for all literacy educators illuminates the intersection of research on literacy

instruction and teacher evaluation. Since 2009, 46 states have changed or revised policies related to evaluating teachers and school leaders. In order for these new policies to be used to support and develop effective literacy instruction, resources are needed that connect the best of what is known about teaching literacy with current evaluation policies and support practices. A major contribution to meeting this need, the volume brings together a range of perspectives on tools, systems, and policies for the evaluation of teaching, organized into two sections:

- **Crafting Systems and Policies for Evaluating Literacy Instruction**
- **Examples of Alternative Systems/Approaches for Evaluating Literacy**

Instruction Across the text, expert scholars in the field emphasize the need for literacy professionals to do more than merely apply generic observation instruments for teacher evaluation, but also to consider how these tools reflect professional values, how elements of effective literacy instruction can be unearthed or included within them, and how teacher evaluation systems and policies can be used to increase students' opportunities to develop literacy.

What could be more frustrating for teachers than teaching an important lesson and then having students unable to recall the content just 24 hours later? In this new edition of Marcia Tate's best-selling "Worksheets Don't Grow Dendrites", her 20 field-tested, brain-compatible instructional

strategies that maximize memory and minimize forgetting are supported by new classroom applications and research throughout. Each short chapter is devoted to one of the strategies and includes: the brain research and learning style theory undergirding the strategy, sample classroom activities utilizing the strategy, and reflection/action planning steps. As Tate's many workshop participants worldwide can attest, using these strategies will not only help students retain content and increase motivation but will also improve the classroom environment.
