The Beatles, the 1968 double LP more commonly known as the White Album, has always been viewed as an oddity in the group’s oeuvre. Many have found it to be inconsistent, sprawling, and self-indulgent. The Beatles through a Glass Onion is the first-ever scholarly volume to explore this seminal recording at length, bringing together contributions by some of the most eminent scholars of rock music writing today. It marks a reconsideration of this iconic but under-appreciated recording and reaffirms the White Album’s significance in the Beatles’ career and in rock history. This volume treats the White Album as a whole, with essays scrutinizing it from a wide range of perspectives. These essays place the album within the social and political context of a turbulent historical moment; locate it within the Beatles’ lives and careers, taking into consideration the complex personal forces at play during the recording sessions; investigate the musical as well as pharmaceutical influences on the record; reveal how it reflects new developments in the Beatles’ songwriting and arranging; revisit the question of its alleged disunity; and finally, track its legacy and the breadth of its influence on later rock, pop, and hip-hop artists. The Beatles through a Glass Onion features the scholarship of Adam Bradley, Vincent Benitez, Lori Burns, John Covach, Walter Everett, Michael Frontani, Steve Hamelman, Ian Inglis, John Kimsey, Mark Osteen, Russell Reising, Stephen Valdez, Anthony D. Villa, Kenneth Womack, and Alyssa Woods. John Covach’s Afterword summarizes the White Album’s lasting impact and value. The Beatles through a Glass Onion represents a landmark work of rock music scholarship. It will prove to be an essential and enduring contribution to the field.

Intelligent Decision Support Systems have the potential to transform human decision making by combining research in artificial intelligence, information technology, and systems engineering. The field of intelligent decision making is expanding rapidly due, in part, to advances in artificial intelligence and network-centric environments that can deliver the technology. Communication and coordination between dispersed systems can deliver just-in-time information, real-time processing, collaborative environments, and globally up-to-date information to a human decision maker. At the same time, artificial intelligence techniques have demonstrated that they have matured sufficiently to provide computational assistance to humans in practical applications. This book includes contributions from leading researchers in the field beginning with the foundations of human decision making and the complexity of the human cognitive system. Researchers contrast human and artificial intelligence, survey computational intelligence, present pragmatic systems, and discuss future trends. This book will be an invaluable resource to anyone interested in the current state of knowledge and key research gaps in the rapidly developing field of intelligent decision support.
