Bullied by his second daughter into putting the family's favourite recipes into book form, this subject became a sub-theme in what turned out to be an autobiography, but one written about an ordinary life although with an ability to find the humorous side of

most events. For serious foodies this book may be a little thin on content but there are some interesting pieces of food history and it is very much a personal view of the last sixty years. The book is set out in four sections, based loosely on four periods of the author's life, and given titles based on a four course meal of hors d'oeuvres, fish, meat and dessert entitled "horses doovers, fishy tales, butcher's meat and just desserts". If you want a relaxing read on an inconsequential life which may make you smile, buy this book. If you want a serious cookery book or autobiography of someone famous or important, then you will have to look elsewhere. What does come through is here is a book written by a guy with a love

of life, a beard more appropriate to a mad badger and a slightly quirky sense of humour who writes for his own enjoyment but with a warmth others may find undemanding.

This important book examines the motives that drive family historians and explores whether those who research their ancestral pedigrees have distinct personalities, demographics or family characteristics. It describes genealogists' experiences as they chart their family trees including their insights, dilemmas and the fascinating, sometimes disturbing and often surprising, outcomes of their searches. Drawing on theory and research from psychology and

other humanities disciplines, as well as from the authors' extensive survey data collected from over 800 amateur genealogists, the authors present the experiences of family historians, including personal insights, relationship changes, mental health benefits and ethical dilemmas. The book emphasises the motivation behind this exploration, including the need to acknowledge and tell ancestral stories, the spiritual and health-related aspects of genealogical research, the addictiveness of the detective work, the lifelong learning opportunities and the passionate desire to find lost relatives. With its focus on the role of family history in shaping personal identity and contemporary culture, this is fascinating reading for anyone studying genealogy and family history, professional genealogists and those researching their own history.

Tessie Tremaine is mortified when her middle school English teacher, affectionately known as Mean Old Mrs. Parker, assigns a family tree project. As the daughter of parents who were both adopted, Tessie is mortified; she

imagines a postage-stamp twig showing nothing but her four immediate family members. As the rest of her classmates begin to create trees filled with many family members, Tessie agonizes over the thought of exposing what her parents call their own little family island.

Desperate for help, Tessie turns to her honorary grandmother, who takes her to a rose show where she learns about the art of grafting roses. Suddenly, the family tree project takes on a whole new meaning. In this poignant young adult tale, a girl struggling to find her roots soon discovers that family is much more than who she is related to by blood.

This book approaches the challenges the Arctic has faced and is facing through a lens of opportunity. Through pinpointed examples from and dealing with the Circumpolar North, the Arctic is depicted as a region

where people and peoples have managed to endure despite significant challenges at hand. This book treats the 'Arctic of disasters' as an innovated narrative and asks how the 'disaster pieces' of Arctic discourse interact with the ability of Arctic peoples, communities and regions to counter disaster, adversity, and doom. While not neglecting the scientifically established challenges associated with climate change and other (potentially) disastrous processes in the north, this book calls for a paradigm shift from perceiving the
