Jug of Silver America's Test Kitchen

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

While the ABPN has now supplied such standards for psychiatry, psychiatric interviewing instruction has not been standardized in the US or in other countries. Similarly, the few psychiatric interviewing books available are written in textbook form, often long and often from the subspecialty perspective (e.g. psychodynamic interviewing). Critically, no interviewing guides to date take a true biopsychosocial perspective. That is, they limit themselves to "interviewing" as an isolated technique divorced from full patient assessment, which for quality patient care must include the interface of psychological and social components with biological components. Similarly, few interviewing texts are fully integrated with DSM/ICD categorical diagnostic schemata, even though these descriptive diagnostic systems represent the very core of our clinical language—the lingua franca of the mental health professions. Without good descriptive diagnoses there cannot be adequate communication of clinical data among providers. The proposed book will meet this need for training in biopsychosocial assessment and diagnosis. The patient interview is at the heart of psychiatric practice. Listening and interviewing skills are the primary tools the psychiatrist uses to obtain the information needed to make an accurate diagnosis and then to plan appropriate treatment. The American Board of Psychiatry and Neurology and the Accrediting Council on Graduate Medical Education identify interviewing skills as a core competency for psychiatric residents. The Psychiatric Interview: evaluation and diagnosis is a new and modern approach to this topic that fulfills the need for training in biopsychosocial assessment and diagnosis. It makes use of both classical and new knowledge of psychiatric diagnosis, assessment, treatment planning and doctor-patient collaboration.

Written by world leaders in education, the book is based on the acclaimed Psychiatry Third Edition by Tasman, Kay et al, with new chapters to address assessment in special populations and formulation. The psychiatric interview is conceptualized as integrating the patient's experience with psychological, biological, and environmental components of the illness. This is an excellent new text for psychiatry residents at all stages of their training. It is also useful for medical students interested in psychiatry and for practicing psychiatrists who may wish to refresh their interviewing skills.

Lance Loud came to represent the gay community, and in addition, embodied the creative spirit and genius of outsider status that became the 1980s and fuelled so much of what has evolved today in our culture in terms of art, music and literature. In 2003, PBS broadcast the program, *Lance Loud: A Death in an American Family*, which was filmed in 2001 while visiting the family again, at the invitation of Lance before his death at age 50. As seen here, short as Lance's life was, it was a monumental one that continues to resonate to the present day.

This practical text is an excellent introduction to the clinical skills all physicians, particularly those in primary care disciplines, need to treat their patients in a humane fashion and at a reasonable cost. The authors focus on patient-centered, or generalist, skills that will help the biomedically oriented physician become more comfortable in managing patient care situations. In addition, the chapters review the diagnostic, treatment, and technical skills that medical students encountered in their Introduction to Clinical Medicine or Physical Diagnosis courses. The book's clinical cases will stimulate class discussions and provide vignettes for skills practice.

The Ultimate Guide To Choosing a Medical Specialty G Editions LLC

Based on George Engel's model, The Biopsychosocial Formulation Manual presents ways to help psychiatry residents and students effectively gather and organize patient data to arrive at a complete mental health history in a limited timeframe. While most current models only take one factor into account, Campbell and Rohrbach emphasize and analyze three essential components (biological, social, and psychological). The process of identifying pertinent data for each component of the biopsychosocial formulation is explicated in detail. A separate section outlines how to use the biopsychosocial formulation to generate treatment recommendations. This volume includes a complete package for practicing the biopsychosocial method; this easy-to-use guide includes a data record sheet and a companion CD to facilitate organization and assessment, appealing to both the psychiatric professional and the trainee.
