This practical text is an excellent

introduction to the clinical skills all physicians, particularly those in primary care disciplines, need to treat their patients in a humane fashion and at a reasonable cost. The authors focus on patient-centered, or generalist, skills that will help the biomedically oriented physician become more comfortable in managing patient care situations. In addition, the chapters review the diagnostic, treatment, and technical skills that medical students encountered in their *Introduction to Clinical Medicine* or

Physical Diagnosis courses. The book's clinical cases will stimulate class discussions and provide vignettes for skills practice. Jug of Silver Academy

Surgery. Each chapter draws together a fascinating selection of the most important clinical trials across every subspecialty within General Surgery, as selected and appraised by a panel of experts. Organized according to a common format, each discussion offers a clear structure by which to appraise the medical literature. Following a background

summary of each trial, experts discuss the impact of the research and critique the methods used, giving the reader rapid understanding of the paper's place within the wider field of research. This emphasis on the tools of critical appraisal is enhanced by an introductory chapter equipping the reader with the skills required to knowledgeably appraise a research paper.

For clinicians needing to keep abreast of the vast scope of medical research, this book will prove an interesting and timesaving resource, but it will also appeal to allied health professionals keen to improve the depth of their understanding of surgery. By bringing together the evidence base with expert guidance on critical appraisal, higher surgical trainees preparing for

the academic and specialty sections of the FRCS exit examination will also find the text invaluable as a means of consolidating and nuancing their knowledge. Behind the Knife ABSITE Podcast Companion McGraw-Hill Education / Medical The patient interview is at the heart of psychiatric practice. Listening and interviewing skills are the primary tools

the psychiatrist uses to obtain the information needed to make an accurate diagnosis and then to plan appropriate treatment. The American Board of Psychiatry and Neurology and the Accrediting Council on Graduate Medical Education identify interviewing skills as a core competency for psychiatric residents. The Psychiatric Interview: Evaluation and Diagnosis is a new and modern approach to this

topic that fulfills the need for training in biopsychosocial assessment and diagnosis. It makes use of both classical and new knowledge of psychiatric diagnosis, assessment, treatment planning, and doctor – patient collaboration. Written by world leaders in education, the book is based on the acclaimed Psychiatry, Third Edition, by Tasman and Kay et al., with new chapters to address assessment in special

populations and formulation. The psychiatric interview is conceptualized as integrating the patient ' s experience with psychological, biological, and environmental components of the illness. This is an excellent new text for psychiatry residents at all stages of their training. It is also useful for medical students interested in psychiatry and for practicing psychiatrists who may wish to refresh their interviewing skills. The Psychiatric

This important new verse translation of the extant works and major

Callimachus includes a full Introduction, covering the poet's life and times, the range of his achievements, and the difficulties in the way of appreciation. It does not offer, as other translations do, a mere selection of fragments but presents them as integral parts of the poetry books in which they originally figured, as these can be reconstructed

in the light of modern research. Each fragment is introduced in relation to what precedes and follows it, enabling students and general readers, for the first time ever, to assess what Callimachus was like in his most important productions. In addition to this introductory help, the Notes take up individual points of difficulty, all proper names and adjectives are explained
