This book disseminates original research on learning in and from practice in pre-service teacher education. Authors such as Lederman and Lederman describe the student teaching practicum (or work-integrated learning [WIL]), which is an essential component of pre-service teacher education, as the 'elephant in the room'. These authors note that 'the capstone experience in any teacher education programme is the student teaching practicum... [a]fter all, this is where the rubber hits the road'. However, many teacher educators will agree that this WIL component is sometimes very insufficient in assisting the student teacher to develop their own footing and voice as a teacher. This is the 'gap' that this research book addresses. Most of the chapters in the book report empirical data, with the exception of two chapters that can be categorized as

systematic reviews. WIL is addressed from various angles in the chapters. Chapter 6 focuses on research related to what makes Finnish teacher education so effective, and in Chapter 4 researchers of the University of Johannesburg disseminate their findings on establishing a teaching school (based on Finnish insights) in Johannesburg. Chapter 3 highlights the challenges faced in open-and distance learning teacher education contexts. Several of the chapters disseminate research findings on alternative interventions to classic WIL, namely, where "safe spaces" or laboratories are created for student teachers to learn and grow professionally. These could either be simulations, such as software programmes and avatars in the intervention described in Chapter 2; student excursions, as the findings in chapters 5, 7 and 10 portray; or alternative approaches to WIL (e.g. Chapters 11 and 12). The book is devoted to scholarship in the field of pre-service teacher education. The target audience is scholars working in the fields of pre-service teacher education, work-integrated learning, and self-directed learning. The book makes a unique contribution in terms of firstly its extensive use of Cultural-Historical Activity Theory as a research lens, and secondly in drawing on various theoretical frameworks. Both quantitative and qualitative research informed the findings of the book.

The chemistry of heterocyclic compounds now forms one of the most extensive and important branches of organic chemistry. The rapid expansion of investigation in this field is due largely to the ever increasing practical importance of heterocyclic compounds. The present stage in the development of organic chemistry and closely allied branches of biology is characterized by extensive investigation of physiologically active substances encountered in the plant and animal world and playing important parts in the life processes of micro- and macro-organisms. This extensive investigation of alkaloids, vitamins, hormones, antibiotics and their synthetic substitutes, and also of substances that control the biochemical processes of the nervous system, has acted as a powerful stimulus to the further development of the chemistry of heterocyclic compounds. Moreover, there are many well known applications of heterocyclic compounds in the manufacture of dyes, synthetic resins, synthetic rubbers, and other important materials. In response to growing demands, several monographs and treatises on the chemistry of heterocyclic compounds have appeared in recent years, the most comprehensive of these being the series "Heterocyclic Compounds," edited by R. C. Elderfield, which is already appearing in Russian translation. On the other hand, the lack of a practical guide to the laboratory preparation of heterocyclic compounds is being felt more and more.

Ratti and McWaters wrote this series with the primary goal of preparing students to be successful in calculus. Having taught both calculus and precalculus, the authors saw firsthand where students would struggle, where they needed help making connections, and what material they needed in order to succeed in calculus. Their experience in the classroom shows in each chapter, where they emphasize conceptual development, real-life applications, and extensive exercises to encourage a deeper understanding. Precalculus: A Unit Circle Approach, Second Edition, offers the best of both worlds: rigorous topics and a friendly, "teacherly" tone. Why and how American colleges and universities need to change in order to meet the nation's pressing needs American higher education faces some serious problems—but they are not the ones most people think. In this brief and accessible book, two leading experts show that many so-called crises—from the idea that typical students are drowning in debt to the belief that tuition increases are being driven by administrative bloat—are exaggerated or simply false. At the same time, many real problems—from the high dropout rate to inefficient faculty staffing—have received far too little attention. In response, William G. Bowen and Michael S. McPherson provide a frank assessment of the biggest challenges confronting higher education and propose a bold agenda for reengineering essential elements of the system to meet them. The result promises to help shape the debate about higher education for years to come. Lesson Plan shows that, for all of its accomplishments, higher education today is falling short when it comes to vital national needs. Too many undergraduates are dropping out or taking too long to graduate; minorities and the poor fare worse than their peers, reinforcing inequality; and college is unaffordable for too many. But these problems could be greatly reduced by making significant changes, including targeting federal and state funding more efficiently; allocating less money for "merit aid" and more to match financial need; creating a respected "teaching corps" that would include nontenure faculty; improving basic courses in fields such as math by combining adaptive learning and face-to-face teaching; strengthening leadership; and encouraging more risk taking. It won't be easy for faculty, administrators, trustees, and legislators to make such

sweeping changes, but only by doing so will they make it possible for our colleges and universities to meet the nation's demands tomorrow and into the future.

"Locus of Authority argues that every issue facing today's colleges and universities, from stagnant degree completion rates to worrisome cost increases, is exacerbated by a century-old system of governance that desperately requires change. While prior studies have focused on boards of trustees and presidents, few have looked at the place of faculty within the governance system. Specifically addressing faculty roles in this structure, William G. Bowen and Eugene M. Tobin ask: do higher education institutions have what it takes to reform effectively from within? Bowen and Tobin use case studies of four very different institutions--the University of California, Princeton University, Macalester College, and the City University of New York--to demonstrate that college and university governance has capably adjusted to the necessities of the moment and that governance norms and policies should be assessed in the context of historical events. The authors examine how faculty roles have evolved since colonial days to drive change but also to stand in the way of it. Bowen and Tobin make the case that successful

reform depends on the artful consideration of technological, financial, and cultural developments, such as the explosion in online learning. Stressing that they do not want to diminish faculty roles but to facilitate their most useful contributions, Bowen and Tobin explore whether departments remain the best ways through which to organize decision making and if the concepts of academic freedom and shared governance need to be sharpened and redefined. Locus of Authority shows that the consequences of not addressing college and university governance are more than the nation can afford"--
