GO! All in One: Computer Concepts and Applications Sterling Publishing (NY)
"Intended as an upper-level undergraduate or introductory graduate text in computer science theory," this book lucidly covers the key concepts and theorems of the theory of computation. The presentation is remarkably clear; for example, the "proof idea," which offers the reader an intuitive feel for how the proof was constructed, accompanies many of the theorems and a proof. Introduction to the Theory of Computation covers the usual topics for this type of text plus it features a solid section on complexity theory--including an entire chapter on space complexity. The final chapter introduces more advanced topics, such as the discussion of complexity classes associated with probabilistic algorithms.

It is widely agreed throughout the world that education and access to education are human rights. In order to accommodate the educational needs of people globally, technology will be required that supports inclusion and promotes equity for both learning processes and governance in educational institutions. In order to achieve this, technological resources must be designed to be accessible and usable for all individuals by implementing user-centered design (UCD) and user experience design (UXD) processes. UXD and UCD Approaches for Accessible Education is an academic research publication that explores thoughts and experiences on accessible and equitable education from perspectives on human-computer interaction, user research, and design thinking. It seeks to improve the understanding on how technology should be designed to truly contribute to and support accessibility and equity in education. Featuring a wide range of topics such

as online courses, inclusive education, and virtual reality, this publication is essential for academicians, curriculum designers, researchers, instructional designers, educational software developers, IT consultants, policymakers, administrators, and students.
