Midwifery Practice: Critical Illness, Complications And Emergencies Case Book Synclitic Press

Witchcraft and magic are topics of enduring interest for many reasons. The main one lies in their extraordinary interdisciplinarity: anthropologists, folklorists, historians, and more have contributed to build a body of work of extreme variety and consistence. Of course, this also means that the subjects themselves are not easy to assess. In a very general way, we can define witchcraft as a supernatural means to cause harm, death, or misfortune, while magic also belongs to the field of supernatural, or at least esoteric knowledge, but can be used to less dangerous effects (e.g., divination and astrology). In Western civilization, however, the witch hunt has set a very peculiar perspective in which diabolical witchcraft, the invention of the Sabbat, the persecution of many thousands of (mostly) female and (sometimes) male presumed witches gave way to a phenomenon that is fundamentally different from traditional witchcraft. This Special Issue of Religions dedicated to Witchcraft, Demonology, and Magic features nine articles that deal with four different regions of Europe (England, Germany, Hungary, and Italy) between Late Medieval and Modern times in different contexts and social milieus. Far from pretending to offer a complete picture, they focus on some topics that are central to the research in those fields and fit well in the current "cumulative concept of Western witchcraft" that rules out all mono-causality theories, investigating a plurality of causes.

Myles Textbook for Midwives MDPI

The first book to present the history, ideas, life and works of Chinese midwives and birth attendants, this volume seeks to encapsulate and explain the changing ideas about the practice of midwifery in China. Using participant observations and interviews, it examines each phase of the development of midwifery in depth. Providing a systematic study of the existing literature and contemporary national health policies, it analyses the factors contributing to the current demise of midwifery in China, such as the absence of national regulation, high standards of education and national midwives' associations. Furthermore, it argues that China's national statistics in the past six decades demonstrate clear evidence that minimising maternal mortality rates will only happen through wider availability of services, rather than through obstetric technology or facility based care. Ultimately, therefore this book supports the view that humanity and midwifery will survive to overcome domination by both technology and market forces and that economic growth and medical technology alone will not be sufficient in providing effective healthcare. This book is an indispensable resource for the study of Chinese midwifery, both in theory and in practice. As such it will be useful to students and scholars of Midwifery, Women's Health, Sociology and culture and society in China.
