A groundbreaking introduction to vectors, matrices, and least squares for engineering applications, offering a wealth of practical examples.

Proofs from THE BOOK Routledge

According to the great mathematician Paul Erdős, God maintains perfect mathematical proofs in The Book. This book presents the authors candidates for such "perfect proofs," those which contain brilliant ideas, clever connections, and wonderful observations, bringing new insight and surprising perspectives to problems from number theory, geometry, analysis, combinatorics, and graph theory. As a result, this book will be fun reading for anyone with an interest in mathematics.

Scholars working at the intersection of African-American history and the history of technology are redefining the idea of technology to include the work of the skilled artisan and the ingenuity of the self-taught inventor. Although denied access through most of American history to many new technologies and to the privileged education of the engineer, African-Americans have been engaged with a range of technologies, as makers and as users, since the colonial era. A Hammer in Their Hands

(the title comes from the famous song about John Henry, "the steel-driving man" who beat the steam drill) collects newspaper and magazine articles, advertisements for runaway slaves, letters, folklore, excerpts from biography and fiction, legal patents, protest pamphlets, and other primary sources to document the technological achievements of African-Americans. Included in this rich and varied collection are a letter from Cotton Mather describing an early method of smallpox inoculation brought from Africa by a slave; selections from Frederick

Douglass's autobiography and Uncle Tom's Cabin; the Confederate Patent Act, which barred slaves from holding patents; articles from 1904 by Booker T. Washington and W. E. B. DuBois, debating the issue of industrial education for African-Americans; a 1924 article from Negro World, "Automobiles and Jim Crow Regulations"; a photograph of an all-black World War II combat squadron; and a 1998 presidential executive order on environmental justice. A Hammer in Their Hands and its companion volume of essays, Technology and the African-American Experience (MIT Press,

2004) will be essential references in an emerging area of study.

How to Pass Technical Selection Tests

Cambridge University Press

This revised textbook motivates and illustrates the techniques of applied probability by applications in electrical engineering and computer science (EECS). The author presents information processing and communication systems that use algorithms based on probabilistic models and techniques, including web searches, digital links, speech recognition, GPS, route planning, recommendation systems, classification, and estimation. He then explains how these applications work and, along the way, provides the readers with the understanding of the key concepts and methods of applied probability. Python labs enable the

readers to experiment and consolidate their understanding. The book includes homework, solutions, and Jupyter notebooks. This edition includes new topics such as Boosting, Multi-armed bandits, statistical tests, social networks, queuing networks, and neural networks. For ancillaries related to this book, including examples of Python demos and also Python labs used in Berkeley, please email Mary James at mary.james@springer.com. This is an open access book.

This text is an unbound, three hole punched version. Fundamentals of Materials Science and Engineering: An Integrated Approach, Binder Ready Version, 5th Edition takes an integrated approach to the sequence of topics – one specific structure, characteristic, or

property type is covered in turn for all three basic material types: metals, ceramics, and polymeric materials. This presentation permits the early introduction of non-metals and supports the engineer's role in choosing materials based upon their characteristics. Using clear, concise terminology that is familiar to students, Fundamentals presents material at an appropriate level for both student comprehension and instructors who may not have a materials background. This text is an unbound, three hole punched version. Access to WileyPLUS sold separately.
