Includes Publications received in terms of Copyright act no. 9 of 1916.

[N5 Mathematics](#) Hodder Gibson

This book presents computer programming as a key method for solving mathematical problems. There are two versions of the book, one for MATLAB and one for Python. The book was inspired by the Springer book TCSE 6: A Primer on Scientific Programming with Python (by Langtangen), but the style is more accessible and concise, in keeping with the needs of engineering students. The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows the students to write simple programs for solving common mathematical problems with numerical methods in engineering and science courses. The emphasis is on generic algorithms, clean design of programs, use of functions, and automatic tests for verification.

Exam Board: SQA Level: National 5 Subject: Maths First Teaching: 2017, First Exam: 2018

Curriculum for Excellence Remedia Publications

This book is an introduction to the language and standard proof methods of mathematics. It is a bridge from the computational courses (such as calculus or differential equations) that students typically encounter in their first year of college to a more abstract outlook. It lays a foundation for more theoretical courses such as topology, analysis and abstract algebra. Although it may be more meaningful to the student who has had some calculus, there is really no prerequisite other than a measure of mathematical maturity.

National 5 Maths HarperCollins UK

Provides revision notes on the key topic areas with many examples. Written in CGP style, this work has an odd bit of fun thrown in to keep concentration levels up.
