Vacuum System The N55 engine is equipped with a vacuum pump for generating the vacuum required by the brake booster and the auxiliary consumers (exhaust flaps and wastegate). A vacuum accumulator (built into the cylinder head cover) is used to ensure there is sufficient vacuum for the wastegate valve at all times.

BMW N55 Engine Assembly Time-Lapse

BMW's N55 engine. If you are looking for an N55 engine for sale instead of an N54 engine on eBay, you will probably know that the N55 is also a turbocharged straight-6. It differs in that it is BMW's first twin-scroll turbocharger. The N55 came into production in 2009.

Complete Engines for BMW 135i for sale | eBay

Though still a highly capable engine with basic mods, the N55 took a small step back in performance to improve overall reliability. Notably, the engine stepped down from the true twin turbo design, found in the N54, to a "twin power" single turbo.

BMW N55 - Wikipedia

BMW's N55 engine began production in 2009 and started replacing the N54 in 2010. However, most applications built in 2010 still carried the twin turbo N54. The N55 officially replaced the N54 in 2011 (with the exception of the 1M and Z4 35i). Although the engines have many similarities this post will highlight the key differences between the two.
