Protecting the health and safety
of health care workers is vital to
the health of each of us.
Preparing for and responding to
a future influenza pandemic or

to a sustained outbreak of an airborne transmissible disease requires a high-level commitment to respiratory protection for health care workers across the wide range of settings in which they work and the jobs that they perform. Keeping health care workers healthy is an ethical commitment both in terms of addressing the occupational risks faced by health care workers and of providing for the continuity of patient care and services needed to maintain the health of individuals and communities. During a public health emergency, challenges will arise

concerning the availability of respiratory protective devices (i.e., respirators). Reusable respirators (specifically, reusable half-facepiece elastomeric respirators) are the standard respiratory protection device used in many industries, and they provide an option for use in health care that has to date not been fully explored. The durability and reusability of elastomeric respirators make them desirable for stockpiling for emergencies, where the need for large volumes of respirators can be anticipated. However, they are used infrequently in health care. Reusable Elastomeric

Respirators in Health Care explores the potential for the use of elastomeric respirators in the U.S. health care system with a focus on the economic, policy, and implementation challenges and opportunities. This report examines the practicability of elastomeric use in health care on a routine basis and during an influenza pandemic or other large aerosol-transmissible outbreak, when demand for respiratory protective devices by U.S. health care personnel may be larger than domestic supplies. The report also addresses the issues regarding emergency stockpile management of

elastomeric respiratory protective devices.

Social assessment for projects in China is an important emerging field. This collection of essays — from authors whose formative work has influenced the policies that shape practice in development-affected communities — locates recent Chinese experience of the development of social assessment practices (including in displacement and resettlement) in a historical and comparative perspective.

Contributors — social scientists

employed by international development banks, national government agencies, and subcontracting groups — examine projects from a practitioner's perspective. Real-life experiences are presented as case-specific praxis, theoretically informed insight, and pragmatic lessons-learned, grounded in the history of this field of development practice. They reflect on work where economic determinism reigns supreme, yet project failure or success often hinges upon sociopolitical and cultural factors.

Protecting 18 million United States health care workers from infectious agents - known and unknown - involves a range of occupational safety and health measures that include identifying and using appropriate protective

equipment. The 2009 H1N1 influenza pandemic and the 2014 Ebola virus outbreak in West Africa have called raised questions about how best to ensure appropriate and effective use of different kinds of personal protective equipment such as respirators, not only to promote occupational safety but also to reduce disease transmission. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care is the summary of a

workshop convened by the Institute of Medicine Standing Committee on Personal Protective Equipment for Workplace Safety and Health to explore the current state of practices and research related to powered air purifying respirator (PAPRs) and potential updates to performance requirements. Presentations and discussions highlighted current health care practices using PAPRs and outlined the research

to date on the use and effectiveness of PAPRs in health care settings with a focus on the performance requirements. The Use and Effectiveness of Powered Air Purifying Respirators in Health Care focuses on efficacy, current training, maintenance, supplies, and possible enhancements and barriers to use in inpatient, clinic, nursing home, and community (home) settings. This report also explores the strengths and

weaknesses of using various approaches to health care PAPR standards. Hospital Respiratory Protection Program Toolkit - Resources for Respirator Program Administrators Introduction to This Toolkit This toolkit was developed to assist hospitals in developing and implementing effective respiratory protection programs, with an emphasis on preventing the transmission of aerosol transmissible diseases (ATDs) to healthcare personnel. Healthcare personnel are paid and unpaid persons who provide

patient care in a healthcare setting or support the delivery of healthcare by providing clerical, dietary, housekeeping, engineering, security, or maintenance services. Healthcare personnel may potentially be exposed to ATD pathogens. Aerosols are particles or droplets suspended in air. ATDs are diseases transmitted when infectious agents, which are suspended or present in particles or droplets, contact the mucous membranes or are inhaled. Hospitals are unique work environments

with challenging occupational health and safety issues. Some hospitals have health and safety personnel who are highly qualified to develop and implement appropriate policies and procedures to control workplace exposures. However, in many facilities with more limited resources, the role of the health and safety professional might be taken on as an added responsibility by someone in the nursing, employee health, or infection control department. This toolkit is written as a practical manual

that can be used by anyone charged with setting up and maintaining a hospital respiratory protection program. A respirator is a device worn over the nose and mouth to protect the wearer from hazardous materials in the breathing zone. Notice: This document was adapted from a California-specific guide, *Implementing Respiratory Protection Programs in Hospitals: A Guide for Respirator Program Administrators*, May 2012, which was developed by the California Department of

Public Health, Occupational Health Branch, and the Public Health Institute under contract no. 254-2010-345-11 from the National Institute for Occupational Safety and Health, National Personal Protective Technology Laboratory (NIOSH-NPPTL). The guide was adapted under contract no. 254-2011-M-40839 from NIOSH-NPPTL to produce this toolkit. This guidance document is not a standard or regulation, and it creates no new legal obligations. It contains recommendations

as well as descriptions of mandatory safety and health standards. The recommendations are advisory in nature, informational in content, and are intended to assist employers in providing a safe and healthful workplace. The Occupational Safety and Health Act requires employers to comply with safety and health standards and regulations promulgated by OSHA or by a state with an OSHA-approved state plan. In addition, the Act's General Duty Clause,

Section 5(a)(1), requires employers to provide their employees with a workplace free from recognized hazards likely to cause death or serious physical harm. * The version of this publication is as described above (this article is updated after each new edition). Here is the most practical, step-by-step guide for making your own respiratory washable face mask. This guide is meant for adults and kids. Wear a face mask or not? The answer is: you should. FDA recommends wearing a mask for protection against some airborne diseases. Face masks can be

made in different thicknesses and with different abilities to protect you from contact with liquids and aerosolized particles. These properties may also affect how easily you can breathe through the face mask and how well the mask protects you. If worn correctly, a face mask helps block large-particle droplets, sprays, or splashes that may contain viruses or bacteria, keeping it from reaching your mouth and nose. They may also help reduce exposure of your saliva and respiratory secretions to others. What you can learn from this guide: Everything you need to know about N95 Masks, and why everyone
