How does what we

we read? Starting
from the premise that

any productive theory of narrative must take into account the presuppositions the reader brings to the text, Before Reading explores how our prior knowledge of literary conventions influences the processes of interpretation and evaluation. Available again with a new introduction by James Phelan.

A comprehensive and critical overview of the major genetically modified mouse lines used to model

human neurobehavioral disorders. Computational Studies on Tilings and Patterns Micrographic reproduction of the 13 volume Oxford English dictionary published in 1933. Behavioral Genetics of the Mouse By examining linguistic variation in Aristophanic comedy, Andreas Willi opens up a new perspective on intra-dialectal diversity in Classical Attic Greek. A representative range of registers, technical

languages, sociolects and (comic) idiolects is described and analysed. Stylistic and statistical observations are combined and supplemented by typological comparisons with material drawn from sociolinguistic research on modern languages. The resulting portrayal of the Attic dialect deepens our understanding of various socio-cultural phenomena reflected in Aristophanes' work, such as the spread of sophistic culture, the re-

evaluation of gender roles and the status of foreigners in Athenian society.
