Report of the United States Commissioner of Fisheries for the Fiscal Year ... with Appendixes UNC Press Books

At least 162 species of fish are known to live or spawn in the freshwaters of the Northeast, representing twenty-eight families and sixteen orders. This diversity springs from an enormous variety of freshwater habitats, including some of the largest lakes in the world; vast and complex river systems; deep, clear lakes in Maine and the Adirondack Mountains; and myriad small lakes, bogs, marshes, and streams that dot the northeast. In the most comprehensive book of its kind, Robert G. Werner offers a thorough survey and analysis, in accessible field guide form, of the region's abundant freshwater fishes. Werner's discussion of the geological history of the region serves as a critical background for understanding not only the fascinating habitats of fishes but also the extensive watersheds and drainages of the region. A reference list provides up-to-date sources, and the species descriptions contain the latest relevant data and research on specific fish. In addition, vivid color plates and extensive line drawings illustrate fish morphology and the distinctive natural colors of numerous species. As a standard resource, this guide will attract a wide audience. This book will be useful to biologists, ecologists, and zoologists and will have an indispensable appeal among anglers, environmentalists, and fisheries professionals.

Global aquaculture production has grown rapidly over the last 50 years. It is generally accepted that there is limited potential to increase traditional fisheries since most fish stocks are well or fully exploited. Consequently increased aquaculture production is required in order to maintain global per capita fish consumption at the present level. Fish farming enables greater control of product quality and safety, and presents the possibility of tailoring products according to consumer demands. This important collection reviews safety and quality issues in farmed fish and presents methods to improve product characteristics. The first part of the book focuses on chemical contaminants, chemical use in aquaculture and farmed fish safety. After an opening chapter discussing the risks and benefits of consumption of farmed fish, subsequent contributions consider environmental contaminants, pesticides, drug use and antibiotic resistance in aquaculture. Part two addresses important quality issues, such as selective breeding to improve flesh quality, the effects of dietary factors including alternative lipids and proteins sources on eating quality, microbial safety of farmed products, parasites, flesh colouration and off-

flavours. Welfare issues and the ethical quality of farmed products are also covered. The final part discusses ways of managing of product quality, with chapters on HACCP, monitoring and surveillance, authenticity and product labelling. With its distinguished editor and international team of contributors, *Improving farmed fish quality and safety* is a standard reference for aquaculture industry professionals and academics in the field. Reviews safety and quality issues in farmed fish and presents methods to improve product characteristics. Discusses contaminants, persistent organic pollutants and veterinary drug residues and methods for their reduction and control. Addresses important quality issues, genetic control of flesh characteristics and the effects of feed on product nutritional and sensory quality.

In this brilliant portrait of the oceans' unlikely hero, H. Bruce Franklin shows how menhaden have shaped America's national—and natural—history, and why reckless overfishing now threatens their place in both. Since Native Americans began using menhaden as fertilizer, this amazing fish has greased the wheels of U.S. agriculture and industry. By the mid-1870s, menhaden had replaced whales as a principal source of industrial lubricant, with hundreds of ships and dozens of factories along the eastern seaboard working feverishly to produce fish oil. Since the Civil War, menhaden have provided the largest catch of any American fishery. Today, one company—Omega Protein—has a monopoly on the menhaden "reduction industry." Every year it sweeps billions of fish from the sea, grinds them up, and turns them into animal feed, fertilizer, and oil used in everything from linoleum to health-food supplements. The massive harvest wouldn't be such a problem if menhaden were only good for making lipstick and soap. But they are crucial to the diet of bigger fish and they filter the waters of the Atlantic and Gulf coasts, playing an essential dual role in marine ecology perhaps unmatched anywhere on the planet. As their numbers have plummeted, fish and birds dependent on them have been decimated and toxic algae have begun to choke our bays and seas. In Franklin's vibrant prose, the decline of a once ubiquitous fish becomes an adventure story, an exploration of the U.S. political economy, a groundbreaking history of America's emerging ecological consciousness, and an inspiring vision of a growing alliance between environmentalists and recreational anglers.

Nick Duncan is a semi-retired, wealthy shipping magnate who lives in idyllic Beautiful Bay, Vanuatu, where he is known as the old patriarch of the islands. He is grieving the loss of his Eurasian true love, Anna, and is suffering for the first time from disturbing flashbacks to the Second World War. So he puts pen to paper and tells the compelling tale of the life he has lived since his war-hero days - a life of adventure, ambition, and fortunes made and lost. A life that has had at its heart the love of two passionate and unforgettable - but very different women. The seductive Anna Til and the beguiling Marg Hamilton have spent a lifetime in contest for Nick's devotion. Nick remains torn between them, and struggles between their two opposing worlds of economic exploitation and environmental crusade - until he is called upon to referee... Moving between the exotic Pacific Islands, Japan and Australia over several decades, *Fishing for Stars* is an epic drama, and the

stunning sequel to Bryce Courtenay's bestselling *The Persimmon Tree*.

The polemics Pablo Neruda was involved in from the 1930s on are legendary, but not even the ferocity of those attacks would lead one to believe that today, a half a century after his death, he would still be on trial. In this consistent and emphatic book, the great Nerudian critic Hernan Loyola addresses Neruda's sins: the machista, the fableteller, the rapist, the bad husband, the bad father, the plagiarist, the insolent one, the abandoner, the Stalinist and the bourgeois. Loyola's objective is to review and discuss with the greatest amount of intellectual honesty that he can humanly muster as an admiring literary critic and with deep sympathy for his unforgettable friend the most tenacious and disseminated accusations attributed to Pablo Neruda. All told, this book is an impressive biographical and poetic interpretation of the most salient aspects of the Nobel Laureate's life.

Steve Andrews had it made, a successful law practice in Miami, a young, beautiful wife and a sailboat to enjoy his leisure time. Then one day he woke up to find his world turned upside down. His law practice was failing and he was informed his wife was not legally his wife. To make matters worse, his wife had emptied all of his escrow and trust accounts, turned the money over to her real husband who had exchanged the funds for gold, and the authorities wanted to talk with him. In a desperate attempt to recover some money, Steve contracted to sell his sailboat to a buyer in Key West. The adventure begins when Steve decides to deliver the boat to Key West by sailing down the Intercoastal Waterway, passing through the protected area known as the backcountry on the Gulf side of the Florida Keys. Beginning his journey, Steve meets Shoestring, a common cormorant who stands as sentry on the bow of his sailboat. As he passes through nature's country, Steve shares his desires and fears with Shoestring. Complicating his goal to reach Key West safely and transfer ownership of his cherished sailboat, he is informed that the missing gold is hidden on his sailboat and his wife's real husband is tracking him to recapture the missing gold.
