How to separate facts from fake science in the Disinformation Age: “Cuts through the chaos . . . sure to keep you laughing while also keeping you thinking.” —Matt Candeias, PhD, author of In Defense of Plants We live in an era when scams, frauds, fake news, fake stories, fake science, and false narratives are everywhere. Fortunately, you don’t need a BS in Science to spot science BS. This guide from educator Dave Farina, aka

YouTube's Professor Dave, is a playful yet practical Science

investigation of popular opinions and consumer trends that permeate our society. Shoppers insist on “organic” everything even if they're unable to define the term. Healers and quantum mystics secure a foothold alongside science-based medicine in an unregulated and largely unchallenged landscape. Misleading marketing is used to sell you products and services that range from ineffectual to downright dangerous. With the knowledge gained from Dave Farina's simple explanations of basic scientific principles, you can learn to spot misinformation and lies on the internet before they spot you. Learn the real science behind such semi-controversial subjects as drugs, vaccines, energy, and biotechnology—and most importantly, arm yourself with the critical-thinking skills everyone needs in a world filled with nonsense. “Scientific literacy is our best defense in an age of increasing disinformation.” —Kellie Gerardi, aerospace professional and author of *Not Necessarily Rocket*

Essential Organic Chemistry, Global Edition CRC Press

This book is a basic reference providing concise, accurate definitions of the key terms and concepts of organic chemistry. Not simply a listing of organic compounds, structures, and nomenclatures, the book is organized into topical chapters in which related terms and concepts appear in close proximity to one another, giving context to the

information and helping to make fine distinctions more understandable. Areas covered include: bonding, symmetry, stereochemistry, types of organic compounds, reactions, mechanisms, spectroscopy, and photochemistry.

The idea of The Fingerprint Sourcebook originated during

a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

The collection of contributions in this volume presents the most up-to-date findings in catalytic hydrogenation. The individual chapters have been written by 36 top specialists each of whom has achieved a remarkable depth of coverage when dealing with his particular topic. In addition to detailed treatment of the most recent problems connected with catalytic hydrogenations, the book also contains a number of previously unpublished results obtained either by the authors themselves or within the organizations to which they are affiliated. Because of its topical

and original character, the book provides a wealth of information which will be invaluable not only to researchers and technicians dealing with hydrogenation, but also to all those concerned with homogeneous and heterogeneous catalysis, organic technology, petrochemistry and chemical engineering.
