
Naming Branched Alkanes Worksheet With Answers

This is likewise one of the factors by obtaining the soft documents of this **Naming Branched Alkanes Worksheet With Answers** by online. You might not require more era to spend to go to the ebook establishment as well as search for them. In some cases, you likewise complete not discover the broadcast Naming Branched Alkanes Worksheet With Answers that you are looking for. It will unquestionably squander the time.

However below, later than you visit this web page, it will be correspondingly no question simple to get as well as download lead Naming Branched Alkanes Worksheet With Answers

It will not acknowledge many mature as we tell before. You can get it while affect something else at home and even in your workplace. therefore easy! So, are you question? Just exercise just what we give below as competently as review **Naming Branched Alkanes Worksheet With Answers** what you as soon as to read!

Because the first set of numbers is lower, the chain is numbered properly. The longest chain in a branched alkane is called the parent chain. Count the number of carbons in each branch. These

groups are called alkyl groups and are named by adding the suffix -yl to the appropriate alkane prefix.

Three Rules of Naming Alkanes

Choose the longest, most substituted carbon chain containing a functional group. A carbon bonded to a functional group must have the lowest possible carbon number. If there are no functional groups, then any substitute present must have the lowest possible number.

Branched Hydrocarbons –
Introductory Chemistry –

To name a branched hydrocarbon, the name of the substituent is combined with the parent name of the hydrocarbon without spaces. However, there is likely one more step. The longest chain of the hydrocarbon must be numbered, and the locant (numerical position of the substituent) must be included to account for possible isomers. As with double and triple bonds, the main chain is numbered to give the substituent the lowest possible number.

In the following practice problems, we will go over naming alkanes using the IUPAC nomenclature rules which include finding the parent chain, numbering it to have the substituents in the correct positions and finally putting all of this together to name the compound. The next exercise will teach you drawing the structure based on the IUPAC name.
