Learn the diagnostic process in internal medicine with this engaging, case-based approach
Symptom to Diagnosis teaches you an evidence-based, step-by-step process for evaluating, diagnosing, and treating patients based on their clinical complaints. By applying this process, you will be able to recognize specific diseases and prescribe the most effective therapy. Each chapter addresses one common complaint and begins with a case and guidance on how to organize the differential diagnosis. As the case progresses, clinical reasoning is explained in detail. The differential diagnosis for that particular case is summarized in tables that highlight the clinical clues and important tests for the leading diagnostic hypothesis and alternative diagnostic hypotheses. As the chapter progresses, the pertinent diseases are reviewed. Just as in real life, the case unfolds in a stepwise fashion as tests are performed and diagnoses are confirmed or refuted. The third edition is enhanced by the addition of five new chapters--Bleeding Disorders, Dysuria, Hematuria, Hypotension, and Sore Throat--as well as a greater emphasis on how to master the process of working from patient level

data (signs, symptoms, and laboratory tests). All chapters incorporate the latest research resulting in new and refined approaches to common symptoms encountered in clinical medicine.

The third edition of this highly regarded introductory textbook continues to cover all aspects of nutrition, including nutritional epidemiology, social aspects of nutrition, the science of food as a source of energy and essential nutrients, and the microbiological safety of food and food processing. Its focus is on nutrition in industrialized nations where nutritional deficiencies in the traditional sense are less of an issue, but the roles of diet in causing or preventing chronic disease and maintaining good 'life-long' health and well-being are gaining ever-increasing attention. The importance of good health promotion is therefore a guiding principle throughout the book, supported by a section devoted to health promotion theory. Nutrition - a health promotion approach is the book of choice for first year nutrition students looking for a readable but comprehensive introduction to the field, dietitians undertaking the nutrition components of their course, and other students undertaking nutrition modules as part of a broader scientific or professional course such as food science or catering.

Fractures in the Elderly: A Guide to Practical Management provides geriatricians and other medical specialists who provide

care for older adults with the vital guidance and most current data and opinions regarding the treatment of elderly patients who sustain a variety of fractures. It also provides orthopedic surgeons with the necessary information and most current data and opinions regarding assessment and management of geriatric conditions that predispose the elderly to fracture, perioperative complications and subsequent functional decline. Each chapter is both readable and appealing not only to geriatricians and orthopedic surgeons but to all clinicians that have contact with elderly patients who have sustained or are at high risk of sustaining a fracture. Emphasis is placed on the fact that although in some cases pre- and post-operative care in elderly fracture patient may proceed as it does in younger individuals, often there are considerations owing to functional status, pre-existing conditions, and age-related physiological declines that require specialized knowledge and alternative approaches. Developed by a group of renowned experts, Fractures in the Elderly: A Guide to Practical Management is a major addition to the literature and provides a wealth of specialized knowledge and approaches to care. It is an essential reference for all clinicians who care for older adults as well as fellows and residents in training.

This special issue of Molecular and Cellular Biochemistry contains original research articles and review papers which were invited from the participants of a recent meeting organized to honour the 60th birthday of Naranjan S. Dhalla, Ph.D., M.D.(Hon.). The meeting, organized by Drs. Morris Karmazyn (London), Grant Pierce (Winnipeg) and Balwant Tuana (Ottawa), was held at the Best Western Lakeside Inn in Kenora, Ontario, Canada on August 23-25, 1996. The meeting was entitled The Cellular Basis of Cardiovascular Function in Health and Disease. There were over 40 invited speakers from 15 different countries represented at the meeting, attended by over 280 people. Keynote lectures were presented by Drs. Norman Alpert (Burlington, VT), Robert Jennings (Chapel Hill, NC), Makoto Nagano (Tokyo, Japan), Howard Morgan (Danville, PA), John Solaro (Chicago, IL) and Nobuskira Takeda (Tokyo, Japan). Dr. Henry Friesen, President of the Medical Research Council of Canada, presented Dr. Dhalla with a plaque at the banquet honouring his research accomplishments over his distinguished career. Dr. Dhalla's outstanding research achievements in understanding the subcellular basis of cardiovascular disease were highlighted at the meeting. One of the unique aspects of the meeting was the special effort made by 39 former trainees of Dr. Dhalla to attend the meeting to honour their mentor. The ex-students and trainees came from all over Canada, the United States, Japan, Slovakia, Germany, the Czech Republic, Estonia and the Netherlands. The meeting was judged to be an overwhelming success in terms of the scientific content as well as collaborative interactions initiated.

Bernard Rosner's FUNDAMENTALS OF BIOSTATISTICS is a practical introduction to the methods, techniques, and computation of statistics with human subjects. It prepares students for their future courses and careers by introducing the statistical methods most often used in medical literature. Rosner minimizes the amount of mathematical formulation (algebra-based) while still giving complete explanations of all the important concepts. As in previous editions, a major strength of this book is that every new concept is developed systematically through completely worked out examples from current medical research problems. Most methods are illustrated with specific instructions as to implementation using software either from SAS, Stata, R, Excel or Minitab. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.
