This work is a detailed documentation of the Neo-Aramaic dialect spoken by Assyrian Christians in the region of Urmi (northwestern-Iran). It consists of four volumes. Volumes 1 and 2 are descriptions of the grammar of the dialect, including the phonology, morphology and syntax. Volume 3 contains a study of the lexicon, consisting of a series of lists of words in various lexical fields and a full dictionary with etymologies. Volume 4 contains transcriptions and translations of oral texts, including folktales and descriptions of culture and history. The Urmi dialect is the most important dialect among the Assyrian Christian communities, since it forms the basis of a widely-used literary form of Neo-Aramaic.

This textbook presents a comprehensive overview of the environmental impacts of various types of adventure tourism and how these can be best managed. This volume follows on from the authors previous textbook – 'Outdoor Recreation: Environmental Impacts and Management' and continues the aim of developing a deeper understanding of how tourist numbers impact the environment and to provide practical solutions to these problems. Combining their own first-hand experience and research with extensive literature review the authors' present several popular adventure tourism destinations from across the globe, including the Arctic, the Himalayas, Africa, Australia and Scotland as case studies. Chapters cover the particular challenges faced by each region: including impacts on animals and birds; the spread of invasive plant species and diseases; trail impacts on vegetation; impacts on geological, historical and archaeological sites and pollution and waste issues. A discussion and evaluation of the possible management actions for minimising these impacts and how outdoor recreation tourists can be regulated concludes each chapter. This practical and engaging textbook will be invaluable to students and scholars of adventure tourism and outdoor recreation as well as practitioners and managers working in the field.

Some thirty years have passed since the original publication of M. M. Ahsan's *Social Life Under the Abbasids*, but it remains an invaluable resource for the study of the material culture of Abbasid life in the ninth and tenth centuries. Ahsan

arranges his material thematically—costume, food, housing, hunting, indoor and outdoor games, and festivities and festivals. Moreover, that arrangement together with the eclectic mix of citations, also give readers a taste of what it is like to browse through the many kinds of adab works that are Ahsan's main sources, including, among numerous others, anecdotal, biographical, culinary, geographical, and literary texts.

For 23 years and through four editions, *Urban Pest Management in Australia* has been the major reference work for Australian pest control operators. This fifth edition has been extensively revised to support the constantly evolving pest management industry. It features an accessible new format, fully updated chapters, additional colour plates and extra content, including a new section on putting pest control into practice. Ion Staunton draws on his 50 years of industry knowledge to bring Gerozisis and Hadlington's pest management 'bible' to a new generation of technicians.

This unique book brings together a wealth of data on the botanical, ethno-medicinal and pharmacological aspects of over 500 species of Asian medicinal orchids. It starts off by explaining the role and limitations of complimentary and herbal medicines, and how traditional Asian medicine differs from Western, "scientific" medicine. The different Asian medical traditions are described, as well as their modes of preparing herbal remedies. The core of the book presents individual medicinal orchid species arranged by genera. Each species is identified by its official botanical name, synonyms, and local names. Its distribution, habitat and flowering season, uses and pharmacology are described. An overview sums up the research findings on all species within each genus. Clinical observations are discussed whenever available, and possible therapeutic applications are highlighted.

The book closes with chapters on the conservation of medicinal orchids and on the role of randomized clinical trials.

Tree species are ecologically, culturally and economically valuable components of biodiversity and their conservation is essential to the well-being of people in all countries of the world. With increasing general pressures on ecosystems and selective pressures on species, it has become apparent that many tree species are threatened with extinction. The world list of threatened trees presents the results of the first survey of the conservation status of tree species worldwide.

The Andaman and Nicobar Islands, India, consist of 572 islands with a land area of 8,249 km2. Their topography is hilly and undulating, with elevations up to 732 m on the Andaman and up to 568 m on the Nicobar Islands. They are known for their rich biodiversity and a very high degree of endemism in all taxa, especially in plants, reptiles, fishes and corals. Their habitats include bays, mangroves, moist deciduous forests and evergreen forests. Comprising 20 chapters each written by an expert or professional in his/her particular field this book offers new insights into the fascinating faunal communities of these islands and provides the fundamentals for their conservation and environmental management.

The Brooklyn described and pictured here is a complicated and contradictory place. With a long history of racial and economic segregation and waves of gentrifications, Brooklyn is now considered one of America's hippest places. Most of the women who have shared their stories in the pages that follow have lived in Brooklyn all their lives, in neighborhoods like East New York, Bushwick, Brownsville, which have only recently begun to experience the beginnings of gentrification. A majority of residents in these neighborhoods are and have long been people of color. There is higher concentration of people living poverty there than in other parts of the city. The health implications of this structural inequality mean that certain zip codes hold the greatest concentration of people living with HIV/AIDS in Brooklyn.

If we lived in a liquid world, the concept of a "machine" would make no sense. Liquid life is metaphor and apparatus that discusses the

consequences of thinking, working, and living through liquids. It is an irreducible, paradoxical, parallel, planetary-scale material condition, unevenly distributed spatially, but temporally continuous. It is what remains when logical explanations can no longer account for the experiences that we recognize as part of "being alive." *Liquid Life* references a third-millennial understanding of matter that seeks to restore the agency of the liquid soul for an ecological era, which has been banished by reductionist, "brute" materialist discourses and mechanical models of life. Offering an alternative worldview of the living realm through a "new materialist" and "liquid" study of matter, Armstrong conjures forth examples of creatures that do not obey mechanistic concepts like predictability, efficiency, and rationality. With the advent of molecular science, an increasingly persuasive ontology of liquid technologies can be identified. Through the lens of lifelike dynamic droplets, the agency for these systems exists at the interfaces between different fields of matter/energy that respond to highly local effects, with no need for a central organizing system. *Liquid Life* seeks an alternative partnership between humanity and the natural world. It provokes a re-invention of the languages of the living realm to open up alternative spaces for exploration, including contributor Rolf Hughes' "angelology" of language, which explores the transformative invocations of prose poetry, and Simone Ferracina's graphical notations that help shape our concepts of metabolism, upcycling, and designing with fluids. A conceptual and practical toolset for thinking and designing, *liquid life* reunites us with the irreducible "soul substance" of living things, which will neither be simply "solved," nor go away.

This volume comprises three reviews. The first describes isolation, structure determination, syntheses, and biochemistry of the low molecular weight compounds of the secretion of exocrine glands of termites with emphasis to pheromones and defensive compounds. The second review describes recent studies on isolation and structure elucidation of bioactive compounds involved in the life cycle and determination of the molecular mechanisms of the developmental events observed in higher plants. The third contribution reports on the current body of knowledge of African propolis, with a particular emphasis on its chemistry and biological activity.

This sensitive examination of the meanings of landscape draws on the author's rich experience with diverse environments and peoples: the Gitksan and Witsuwit'en of northwestern British Columbia, the Kaska Dena of the southern Yukon, and the Gwich'in of the Mackenzie Delta. Johnson maintains that the ways people understand and act upon land have wide implications, shaping cultures and ways of life, determining identity and polity, and creating and maintaining environmental relationships and economies. Her emphasis on landscape and ways of knowing the land provides a particular take on ecological relationships of First Peoples to land.
