Seminar Papers: Issues, Opportunities and Challenges for Social, Political and Development Education in the Post-Primary Classroom Concept Publishing Company  
Originally published in 1991, this title was begun just before passage of the Education Reform Act of 1988 (ERA 88), which was implemented in the 1990s. This major act along with still-in-force provisions of the 1944 Education Act (with its 17 amendments) comprises the statutes governing education in England and Wales. The study reflects both the criticism and the praise showered on that important legislation, particularly in the Brief History and School Structure sections, and in Chapter 1 with its longer than usual annotations on ERA 88.

Summative assessment has been a contentious issue in educational circles for several decades, particularly high-stakes assessment events which arise at various junctures of the school cycle, especially those at the end of it. The French Baccalaureat and English A-Levels and their numerous clones throughout the francophone and anglophone worlds are household names and represent milestone events in people's lives, as their outcomes are principal determinants of young people's future prospects. These examinations are external--they are devised, conducted and processed by agencies outside the schools, usually ministerial examination units. As such, they act as 'blind' arbiters of student achievement, providing

the proverbial 'level playing field' which ensures the comparability of outcomes. In the pyramidal school structures of yesteryear, examinations acted as filters, regulating the progression of pupils to subsequent tiers of formal education. Exit points occurred from primary school level up, from where unsuccessful candidates could enter the labour force and/or embark on occupationally specific further education and training. With the modernisation of the labour market and an ever-higher social demand for access to higher levels of formal education, the filtering function of examinations at lower levels of schooling has been gradually eroded, while burgeoning numbers of students at the upper secondary level have brought about reforms that include curricular diversification and sometimes radical overhauls of terminating assessment systems (including the modification and, in some instances, abandonment of external examinations). This edited volume brings together the experiences of twenty examination systems from around the world to show how these dynamic entities have adapted over time to the changing context of schooling. Following an introduction by Stephen P. Heyneman of World Bank repute, there are sixteen chapters presenting Country Case Studies, which have been written up under common subheadings, thereby highlighting the comparative nature of the work and facilitating cross-referencing. The subsequent four chapters elaborate on the theme of 'external examinations beyond national borders', including a contribution by the International Baccalaureate Organisation. A

defining feature of the work is the attention it pays to what it calls the 'nuts and bolts' of external examinations, from question-setting to grading procedures. These are, it is argued, instrumental in nurturing and maintaining public confidence in external examinations. The book will be of immense value to people involved in educational policy studies, especially strategic educational planning, as well as those directly concerned with formal assessment. The work has been written to appeal to a wide audience of informed persons--it is accessible to teachers and interested laypeople, as well as to academics."

A Complete Guide to Educational, Technical, Professional and Academic Qualifications in Britain INDIA EXAM PORTAL

Further and Higher Education in the UK has expanded greatly in recent years, bringing into education large numbers of young people who present teachers with new challenges. At the same time, there is an immense pressure to improve the quality of learning and teaching, and to encourage students to be active participants in the process.

This book is aimed at teachers, aspiring teachers and other professionals in upper secondary schools,

further education colleges and universities who wish to increase learner motivation and to create opportunities for greater learner autonomy. It will:  
\* relate learning theory to practice  
\* provide practical help for teachers to understand how they tend to interact with students  
\* suggest how they may build a repertoire of teaching styles that foster sharing of responsibility with learners for more effective learning.
