Natural Solutions to Things That Big You Univ of California Press

Chemical pesticides have many disadvantages. Although they remove the pest, they also kill many of the insects that are useful to the crop, can pollute soil and water supplies, and make people sick. The benefits of chemical pesticides decrease over time as pests become resistant to them. This means that the pesticide kills the weaker pests, leaving the strongest to breed a new generation which is immune to the pesticide. Here is all this book contains: - This Book has covered all those methods and natural chemicals. - This Book is designed for anyone who loves gardening and is looking for effective and easy pest control methods. - Important information on natural and organic pest control - A comparison between organic and inorganic pesticides - Advantages of natural pesticides over synthetic pesticides and chemicals - List of natural pesticides - Recipes of homemade pesticides - Effective tips to control pests naturally The

Book also focuses on home remedies to control pests. Usually, the pesticides available in stores are synthetic even the herbal ones. The best thing about this Book is it is an ultimate compilation of feasible pest control methods that you can easily do at home. By reading this Book and going through a wide range of remedies and recipes of making pesticides at home, you can wave goodbye to inorganic and synthetic methods to control pests.

Pests are an inevitable part of our existence. Without our knowledge we coexist with several kinds of pests may it be through our pets, our plants even in the

security of our own homes. It also comes in different sizes and forms but as microscopic or minute, though visible to the human eye, they appear they create a vast nuisance to our daily lives. With nature's law of cause and effect, humans, in defense to these pests, find ways to control it in the hopes of finally eradicating the pests' existence. We want to get rid of those pests as fast as we can without taking in consideration what makes these products very powerful that it can do what it says it will do. In return, these pests can develop an adaptation mechanism that makes them immune to these commercial products. As a result, we buy another brand or use a different approach that may contain stronger chemical components.

The Organic Gardener's Handbook of Natural Pest and Disease Control Rodale
Control of Insect Behavior by Natural Products presents papers on new biochemical approaches to pest control. The book presents articles on pheromone research with stored-product Coleoptera; some general considerations of insects responses to the chemicals in food plants; and pheromones of the honey bee. The text also includes papers on several substances responsible for the feeding behavior and growth of the silkworm larva; the sensory responses of Phytophagus lepidoptera to chemical and tactile stimuli; and the use of volatile organic sulfur compounds as insect attractants with special reference to host selection. Insect anti-feedants in plants; a house fly attractant in the mushroom; and studies on sex pheromones of the stored grain moths are also considered. The book also demonstrates articles on the electrophysiological investigation of insect olfaction; and host attractants for the rice weevil and the cheese mite. Entomologists, biologists, chemists, and people involved in the research of pest control will find the book invaluable.
