If you are reading this, then you've encountered bed bugs. I wrote this battle plan because getting rid of bed bugs and keeping your home free from bed bugs is a battle...with a very small, blood-sucking enemy. Make no mistake, bed bugs are tough combatants: they wear tough armor, attack under cover of darkness, employ chemical weapons to numb your skin and to cause your blood to flow, retreat to the most difficult to find locations, can survive

without food for as long as 550 days, and hatch reinforcements every 10 days. The good news, if there is any, is that bed bugs are not known to transmit human diseases. One more bit of good news: you can win the battle against bed bugs as long as you have the right reinforcements. According to the University of California Department of Agriculture & Natural Resources, "Although over-the-counter pesticide products that have 'bed bug control' written on the

label can be found on store shelves, they generally are not recommended. Performance of these products under actual field conditions is not known. If you need to use a pesticide, you are better off hiring a licensed, professional pesticide applicator with experience in treating bed bugs." A licensed, professional pest control company is your best ally in eliminating bed bugs from your home. The Bed Bug Battle Plan includes- How to identify bed bugs What to look for in a pest control

company The best practices used by experts at exterminating bed bugs The pros and cons of the three major extermination techniques What you need to do to prepare for bed bug treatment How to de-bug personal items that are not typically treated by a pest control company Ways to avoid future bed bug infestations Travel tips to help you remain bite free DIY Bed Bug Treatment Algonquin Books A practical guide to repelling indoor and outdoor pests

Over the past century, our species has made unprecedented technological innovations with which we have sought to control nature. From river levees to enormous one-crop fields, we continue to try to reshape nature for our purposes - so much so it seems we may be in danger of destroying it. In A

Natural History of the Future, biologist Rob Dunn argues that nothing could be further from the truth: rather than asking whether nature will survive us, better to ask whether we will survive nature. Despite our best - or worst - efforts to control the biological world, life has its own rules, and no amount of human tampering can

rewrite them. Elucidating several fundamental laws of ecology, evolution, and biogeography, Dunn shows why life cannot be stopped. We sequester our crops on monocultured fields, only to find new life emerging to attack them. We dump toxic waste only to find microbes to colonize it. And even in the London Tube, we have seen a new species of

mosquito emerge to take advantage of an apparently inhospitable habitat. Life will not be repressed by our best-laid plans. Instead, Dunn shows us a vision of the biological future and the challenges the next generations could face. A Natural History of the Future sets a new standard for understanding the diversity of life and our future as

a species. *Natural Remedies in the Fight Against Parasites* University of Georgia Press Getting Your FREE Bonus Download this book, read it to the end and see "BONUS: Your FREE Gift" chapter after the conclusion.
