Bed bugs have been making a valiant comeback in the West since the end of the

Second World War, and are now firmly entrenched in our cities. So much so, that every Western hotel has to take special precautions costing an aggregated sum of billions of dollars a year, which is passed on to us, the paying guest. It is long past the time when everyone should take this subject seriously, so, in that vein, I hope that you will find the information below helpful, useful and profitable. The advice in this ebook on how to

deal with bed bugs and related subjects is organised into 18 chapters of about 500-600 words each. I have also included the scientific classification for clarity and the lyrics of two popular songs for the sake of levity. As an added bonus, I am granting you permission to use the content on your own website or in your own blogs and newsletter, although it is better if you rewrite them in your own words first. all across the planet have come to a realization - many of the products that we use everyday are made from harmful manmade chemicals. This extends to the repellents that we use for insects and other pests. While effective at thwarting off nature's critters, the long term effects of some early manmade pesticides and herbicides are just coming into the light. We have seen the harmful effects from years of these dangerous manmade chemicals.
