In *Six-Legged Soldiers*, Jeffrey A. Lockwood paints a brilliant portrait of the many weirdly creative, truly frightening, and ultimately powerful ways in which insects have been used as weapons of war, terror, and torture. He concludes with a critical analysis of today's defenses--and homeland security's dangerous shortcomings--with respect to entomological attacks.

Beginning in prehistoric times and building toward a near and disturbing future, the reader is taken on a journey of innovation and depravity.

Lockwood, an award-winning science writer, begins with the use of "bee bombs" in the ancient world and explores the role of insect-borne disease in changing the course of major battles, from Napoleon's military campaigns to the trenches of World War I. He explores the horrific programs of insect weaponization during

World War II: airplanes designed to drop plague-infested fleas, facilities rearing tens of millions of crop-devouring beetles, and prison camps where doctors tested disease-carrying lice on inmates. The Cold War saw secret government operations involving the mass release of specially developed strains of mosquitoes on an unsuspecting American public--along with the alleged use of disease-carrying and crop-eating pests against North Korea and Cuba. Lockwood reveals how easy it would be to use insects in warfare and terrorism today, pointing to how domestic eco-terrorists in 1989 extorted government officials and wreaked economic and political havoc by threatening to release the notorious Medfly into California's crops. A remarkable story of human ingenuity--and brutality--*Six-Legged Soldiers* is the first comprehensive look at the use

---

of insects as weapons of war, from ancient times to the present day.

Pests are an inevitable part of our existence. Without our

knowledge we coexist with several kinds of pests may it be through our pets, our plants even in the security of our own homes. It also comes in different sizes and forms but as microscopic or minute, though visible to the human eye, they appear they create a vast nuisance to our daily lives. With nature ' s law of cause and effect, humans, in defense to these pests, find ways to control it in the hopes of finally eradicating the pests ' existence. We want to get rid of those pests as fast as we can without taking in consideration what makes these products very powerful that it can do what it says it will do. In return, these pests can develop an adaptation mechanism that makes them immune to these commercial products. As a result, we buy another brand or use a different approach that may contain stronger chemical components.
