E-commerce Construction Kit, Webshop John Wiley & Sons

It can be a concierge, camera, flashlight, game console, magazine, photo editor, panorama maker, note taker, travel planner, radio, bookstore, night-sky guide, GPS, music player, music maker, and plenty more...if only you could figure out which of the 250,000 (and counting) apps to put on your iPhone or iPad or iPod touch. Author Glenn Fleishman set out to discover how to use your device to find a movie, read a book, retrieve a distant file, make a phone call, play a strategy game—to accomplish a host of useful, and sometimes completely unuseful, tasks. Glenn sifted through and road tested thousands of apps to find the nearly 200 programs that fit his criteria for interesting, entertaining, useful—and essential—five-star apps. His clear-eyed selections will surprise and charm you and help you complete tasks, have fun, be creative, and learn something. Want to read a book or PDF or follow your Twitter, RSS, or Facebook feeds? You'll find the perfect app for the job. Ready to find the best action, word, and strategy games—so good, you may never put down your iPhone? We know the ones. Yearning for Thai food in an unfamiliar neighborhood or looking to reserve a table at a local restaurant? This book points you to the perfect apps. Need to track the delivery status of a package or turn your device into a barcode reader? Start reading and start scanning. Want to watch a movie—either from the studios or of your own creation? Glenn can direct you to the perfect app. Plus essential apps that will stream music, make you more productive, keep track of files, and much, much more.

iPhone Secrets SAGE Publications

This is the second edition of Wil van der Aalst's seminal book on process mining, which now discusses the field also in the broader context of data science and big data approaches. It includes several additions and updates, e.g. on inductive mining techniques, the notion of alignments, a considerably expanded section on software tools and a completely new chapter of process mining in the large. It is self-contained, while at the same time covering the entire process-mining spectrum from process discovery to predictive analytics. After a general introduction to data science and process mining in Part I, Part II provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Next, Part III focuses on process discovery as the most important process mining task, while Part IV moves beyond discovering the control flow of processes, highlighting conformance checking, and organizational and time perspectives. Part V offers a guide to successfully applying process mining in practice, including an introduction to the widely used open-source tool ProM and several commercial products. Lastly, Part VI takes a step back, reflecting on the material presented and the key open challenges. Overall, this book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers.

Information and Communication Technologies in Tourism 2007 Pearson Education

An old derelict space ship sits gathering dust in Mr. Waldermulder's transport bay in the community of Redsun on the planet Iperia. Dillon, one of Mr. Waldermulder's indentured servants, dismisses it as a mere hobby ship while Jules, another indent skilled in things mechanical, works furiously to restore it. Todd, the newest indent, hatches his own plan for it. Only fun loving and pretty Shavval, Mr. Waldermulder's niece, seems to have interest in it. But when the restored ship suddenly vanishes, a stranger will stop at nothing short of kidnapping two of them to search for and reclaim what once belonged to him. In the end, the ship will never be found, but other

mysteries far more significant will be unraveled, and four young people will unknowingly step out of their ordinary lives and into the pages of historic and scientific discovery.

Context is of crucial importance for research and applications in many disciplines, as evidenced by many workshops, symposia, seminars, and conferences on specific aspects of context. The International and Interdisciplinary Conference on Modeling and Using Context (CONTEXT), the oldest conference series focusing on context, provides a unique interdisciplinary emphasis, bringing together participants from a wide range of disciplines, including artificial intelligence, cognitive science, computer science, linguistics, organizational science, philosophy, psychology, ubiquitous computing, and application areas such as medicine and law, to discuss and report on context-related research and projects. Previous CONTEXT conferences were held in Rio de Janeiro, Brazil (1997), Trento, Italy (1999, LNCS 1688), Dundee, UK (2001, LNCS 2116), and Palo Alto, USA (2003, LNCS 2680). CONTEXT 2005 was held in Paris, France during July 5–8, 2005. There was a strong response to the CONTEXT 2005 Call for Papers, with 120 submissions received. A careful review process assessed all submissions, with each paper first reviewed by the international Program Committee, and then reviewer discussions were initiated as needed to assure that the final decisions carefully considered all aspects of each paper. Reviews of submissions by the Program Chairs were supervised independently and anonymously, to assure fair consideration of all work. Out of the 120 submissions, 23 were selected as full papers for oral presentation, and 20 were selected as full papers for poster presentation. These outstanding papers are presented in this proceedings.

Zahlen, Ergebnisse und Perspektiven zum IKAROS-Projekt Springer

Viewing transportation through the lens of current social, economic, and policy aspects, this four-volume reference work explores the topic of transportation across multiple disciplines within the social sciences and related areas, including geography, public policy, business, and economics. The book's articles, all written by experts in the field, seek to answer such questions as: What has been the legacy, not just economically but politically and socially as well, of President Eisenhower's modern interstate highway system in America? With that system and the infrastructure that supports it now in a state of decline and decay, what's the best path for the future at a time of enormous fiscal constraints? Should California politicians plunge ahead with plans for a high-speed rail that every expert says—despite the allure—will go largely unused and will never pay back the massive investment while at this very moment potholes go unfilled all across the state? What path is best for emerging countries to keep pace with dramatic economic growth for their part? What are the social and financial costs of gridlock in our cities? Features: Approximately 675 signed articles authored by prominent scholars are arranged in A-to-Z fashion and conclude with Further Readings and cross references. A Chronology helps readers put individual events into historical context; a Reader's Guide organizes entries by broad topical or thematic areas; a detailed index helps users quickly locate entries of most immediate interest; and a Resource Guide provides a list of journals, books, and associations and their websites. While articles were written to avoid jargon as much as possible, a Glossary provides quick definitions of technical terms. To ensure full, well-rounded coverage of the field, the General Editor with expertise in urban planning, public policy, and the environment worked alongside a Consulting Editor with a background in Civil Engineering. The index, Reader's Guide, and cross references combine for thorough search-and-browse capabilities in the electronic edition. Available in both print and electronic formats, **Encyclopedia of Transportation** is an ideal reference for libraries and those who want to explore the issues that surround transportation in the United States and around the world.
