The document reports the state of traffic calming programs in the United States. It also includes historical information about programs in other countries. For the purposes of this report, traffic calming involves changes in street alignment, installation of barriers, and other physical measures to reduce traffic speeds and cut-through volumes in the interest of street safety, livability, and other public purposes. This report focuses mainly on physical measures, including street closures and other volume controls under the traffic

calming umbrella. Education and enforcement activities, such as neighborhood traffic safety campaigns, fall outside the umbrella but will be mentioned where relevant.

"Chapter 160D of the North Carolina General Statutes is the first major recodification and modernization of city and county development regulations since 1905. The endeavor was initiated by the Zoning and Land Use Section of the N.C. Bar Association in 2013 and emanated from the section's rewrite of the city and county board of adjustments statute earlier that year. This bill summary and its many footnotes are intended to help citizens and local governments understand and

The diverging diamond interchange (also known as a double crossover diamond interchange) is a relatively new design to the United States. This design can increase throughput and safety without widening bridge structures. The TRB National Cooperative Highway Research Program's NCHRP Research Report 959: Diverging Diamond Interchange Informational Guide, Second Edition presents a comprehensive guide to the design and operation of diverging diamond interchanges and updates material found in the FHWA's Diverging

Diamond Interchange Informational Guide. A workshop summary is provided that includes an overview of key traffic signal timing concepts at diverging diamond interchanges--from terminology to timing considerations and from operational analysis to traffic signal equipment. Videos viewed during the workshop are also provided.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas

transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will

This important book focuses on the role of human factors in the design and use of automobiles. It should review current knowledge of human characteristics as related to passenger car design and thus serve as a basis for new car design and design evaluation. Comprehensive and accessible, the book is organized around the following

themes: human capabilities and limitations in car design - anthropometry, biomechanics, human vision, motorskills, and cognition; the physical aspects of car design - occupant packaging', entry and egress, seating, luggage loading, occupant protection, thermal environment; informational aspects of design - displays and controls, HUDS, icons, warnings, vehicle lighting and sounds; and special topics such as driving performance models, driver workload, older drivers, and computer-aided ergonomic design.; It is Aimed At Automotive Designers, Government Agencies Concerned With Car passenger transport issues and the ergonomics research community.

This is the New York State edition of the GIC's guide to evaluating and conserving green infrastructure (GI) across the landscape. It provides an historical background to GI, as well as practical steps for creating GI maps and plans for a community. It discusses issues around evaluating green assets, public involvement in the mapping process, and the practical steps in bringing together GIS

---

information into a useful format. It draws from twelve field tests GIC has conducted over the past six years in a diversity of ecological and political conditions, at multiple scales, and in varied development patterns – from wildlands and rural areas to suburbs, cities and towns. This guide is intended to help people make land management decisions which recognize the interdependence of healthy people, strong economies and a vibrant, intact and biologically diverse landscape. Green infrastructure consists of our environmental assets – which GIC also calls ‘natural assets’ – and they should be included in planning processes. Planning to conserve or restore green infrastructure ensures that communities can be vibrant, healthful and resilient. Having clean air and water, as

well as nature-based recreation, attractive views and abundant local food, depends upon considering our environmental assets as part of everyday planning. Available from GIC at [www.gicinc.org](http://www.gicinc.org).
