Combinatorics is a subject of increasing importance, owing to its
links with computer science, statistics and algebra. This is a
textbook aimed at second-year undergraduates to beginning
graduates. It stresses common techniques (such as generating
functions and recursive construction) which underlie the great
variety of subject matter and also stresses the fact that a
constructive or algorithmic proof is more valuable than an
existence proof. The book is divided into two parts, the second at
a higher level and with a wider range than the first. Historical
notes are included which give a wider perspective on the subject.
More advanced topics are given as projects and there are a
number of exercises, some with solutions given.

In 1150 AD, Bhaskaracarya (b. 1114 AD), renowned mathematician and astronomer of Vedic tradition composed Lilavati as the first part of his larger work called Siddhanta Siromani, a comprehensive exposition of arithmetic, algebra, geometry, mensuration, number theory and related topics. Lilavati has been used as a standard textbook for about 800 years. This lucid, scholarly and literary presentation has been translated into several languages of the world. Bhaskaracarya himself never gave any derivations of his formulae. N.H. Phadke (1902-1973) worked hard to construct proofs of several mathematical methods and formulae given in original Lilavati. The present work is an enlargement of his Marathi work and attempts a thorough mathematical explanation of definitions, formulae, short cuts and methodology as intended by Bhaskara. Stitches are followed by literal translations so that the reader can enjoy and appreciate the beauty of accurate and musical presentation in Lilavati. The book is useful to school going children, sophomores, teachers, scholars, historians and those working for cause of mathematics.
