The world of the academic researcher is changing; it used to be enough to work hard, do your research and get your results published. Not so these days. Universities now expect researchers to share their work with the world, as widely as possible. 'Publish or perish' has been replaced by a new mantra, and the

---

pressure is on. In this insightful book, Inger Mewburn and Simon Clews look at some of the most common presentation scenarios that researchers will face when talking about their work. Starting in academia with the deceptively simple art of writing a good email and working through lectures, conference presentations and lightning talks, the book then moves 'off campus' and explores talking to the media, making elevator pitches and creating an effective digital presence on social media. Offering detailed looks at 19 different presentation formats, Mewburn and Clews tap into their vast experience in the field to analyse the challenges and opportunities aligned with each case study and to map out the route to success. With a lightness of touch and an often humorous approach, *Be Visible Or Vanish: Engage, Influence and Ensure Your Research*

*Has Impact* will show you what it takes to achieve that holy grail of modern academia... impact. This text will be invaluable for students, academics and researchers hoping to effectively communicate complex information in a way that can be understood and appreciated by their peers, colleagues and the wider world. The 'Insider Guides to Success in Academia' offers support and practical advice to doctoral students and early-career researchers. Covering the topics that really matter, but which often get overlooked, this indispensable series provides practical and realistic guidance to address many of the needs and challenges of trying to operate, and remain, in academia. These neat pocket guides fill specific and significant gaps in current literature. Each book offers insider perspectives on the often implicit rules of the game -- the things you need to know but usually

---

aren't told by institutional postgraduate support, researcher development units, or supervisors -- and will address a practical topic that is key to career progression. They are essential reading for doctoral students, early-career researchers, supervisors, mentors, or anyone looking to launch or maintain their career in academia.

Drug disasters from Thalidomide to Opren, and other less dramatic cases of drug injury, raise questions about whether the testing and control of medicines provides satisfactory protection for the public. In this revealing study, John Abraham develops a theoretically challenging realist approach, in order to probe deeply into the work of scientists in the pharmaceutical industry and governmental drug regulatory authorities on both sides of the Atlantic. Through the examination of contemporary

---

controversial case studies, he exposes how the commercial interest of drug manufacturers are consistently given the benefit of the scientific doubts about medicine safety and effectiveness, over and above the best interests of patients.; A highly original combination of philosophical rigour, historical sensitivity and empirical depth enables the "black box" of industrial and government science to be opened up to critical scrutiny much more than in previous social scientific study. All major aspects of drug testing and regulation are considered, including pre- clinical animal tests, clinical trials and postmarketing surveillance of adverse drug reactions. The author argues that drug regulators are too dependent on pharmaceutical industry resources and expertise, and too divorced from public accountability. The problem of corporate bias is particularly severe

in the UK, where regulatory decisions about medicine safety are shrouded in greater secrecy than in the US.; Since the purpose of drug regulation should be to maximize the safety and effectiveness of medicines for patients, the public needs and deserves policies to counteract corporate bias in drug testing and evaluation. John Abraham's realist analysis provides a robust basis for policy interventions at the institutional and legislative levels. He proposes that corporate bias could be reduced by more extensive freedom of information, greater autonomy of government scientists from pharmaceutical industry, the development of independent drug testing by the regulatory authority, increased patient representation on regulatory committees, and more frequent and thorough oversight of regulatory performance by the legislature. This book should be of

---

interest to anyone who cares about how medicines should be controlled in modern society. It should prove particularly rewarding for students and researchers in the sociology of science and technology, science and medicines policy, medical sociologists, the medical and pharmaceutical professions, and consumer organizations.
