This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1876 edition. Excerpt: ... 184 DIGEST OF THE LAW OF EVIDENCE. notes. These are the only Acts which deal with the Law of Evidence as I have denned it. It will be observed that they relate to three subjects only--the competency of witnesses, the proof of certain classes of documents, and certain details in the practice of examining witnesses. These details are provided for

twice over, namely, once in 17 & 18 Vict c. 125, ss. 22-27, both inclusive, which concern civil proceedings only; and again in 28 Vict. c. 18, ss. 3-8, which re-enact these provisions in relation to proceedings of every kind. Thus, when the Statute Law upon the subject of Evidence is sifted and put in its proper place as part of the general system, it appears to occupy a very subordinate position in it. The ten statutes above mentioned are the only ones which really form part of the Law of Evidence, and their effect is fully given in twenty-one articles of the Digest, some of which contain other matter besides. The book provides an introduction to all the tools needed for a C programmer. The CD contains sources and binaries for the most popular GNU tools, including their C/C++ compiler. UNIX for FORTRAN Programmers "O'Reilly Media, Inc." "UNIX for FORTRAN Programmers" provides the serious scientific programmer with an introduction to the UNIX operating system and its tools. The intent of the book is to minimize the UNIX entry barrier and to familiarize readers with the most important tools so they can be productive as quickly as possible. "UNIX for FORTRAN Programmers" shows readers how to do things they're interested in: not just how to

use a tool such as "make" or "rcs," but how to use it in program development and how it fits into the toolset as a whole. The tools discussed include: The FORTRAN compiler ("f77"). UNIX interactive command languages, or shells ("csh" for interactive use, "sh" for shell programming). "vi," the standard UNIX editor. Object library management tools ("ar" and "ranlib"). The programming environment (I/O, basic system calls, error handling). The "adb" and "dbx" debuggers. "prof," "gprof," "time," profiling tools. "make," a tool for automating complex compilations. "rcs," a source code management system for large projects. Common porting problems.
