Some 20 years ago, I was privileged to share in writing a book on the descriptive chemistry of the 4d, 5d, 4f and 5f metals that included these eight elements within its

<p>compass (S.A. Cotton and F.A. Hart, The Heavy Transition Elements, Macmillan, 1975). This volume shares the same aim of covering the descriptive chemistry of silver, gold and the six platinum metals in some detail at a level suitable for advanced undergraduate and postgraduate study. It does not attempt to be a comprehensive</p>	<p>treatise on the chemistry of these metals. It attempts to fill a slot between the general text and the in-depth review or monograph. The organometallic chemistry is confined to σ-bonded compounds in normal oxidation states; compounds with IT-bonding ligands are generally excluded. Their inclusion would have increased the</p>	<p>length of the book considerably and, moreover, their recent chemistry has been extensively and expertly reviewed in the new Comprehensive Organometallic Chemistry, II, eds G. Inspired by a 'paleo' way of eating, these are the meals he cooks for his family every day, featuring loads of fresh veggies, nuts and seeds,

sustainable seafood and meat, and free of gluten, sugar and dairy. Drawing on his love of the cuisines of Thailand, Turkey, Vietnam and Morocco, he shows you how to make lighter, healthier versions of your favourite breakfasts, salads, curries and burgers. And while you won't find any sugar, there are some delicious gluten- and dairy-free treats, such as Young Coconut Ice Cream and Raspberry Mousse Cheesecakes. This is a specially formatted fixed layout ebook that

retains the look and feel of the print book. [Radiotherapy of Ocular Disease](#) Hodder Children's Books This book discusses current controversial topics and therapeutic strategies in the treatment of malignant and benign ocular diseases, with special emphasis on ocular tumors. Written by leading specialists, the articles highlight the latest developments in the diagnosis and therapy of retinoblastomas, uveal melanomas and malignant lymphomas. Further contributions include such topics as the optimization

of dosimetry and design of radioactive eye plaques, the effects and side-effects of radiotherapy of age-related macular degeneration, and new approaches for perioperative organ-preserving brachytherapy for orbital tumors. Readers will be particularly interested in the discussion of possible side-effects of photon and proton beam radiotherapy of the eye and their minimization. Extensive data from clinical studies evaluating radiotherapy in the management of endocrine orbitopathy are also provided. The final

part is dedicated to radiotherapy of benign ocular diseases such as pterygium or choroidal and retinal hemangiomas. Compiling the most up-to-date and comprehensive information on ocular radiotherapy currently available and offering an interdisciplinary perspective, this book will be appreciated by ophthalmologists, radiotherapists and oncologists.
