The need to address the financial literacy of women and girls as a way to improve their financial empowerment, opportunities, and well-being has been acknowledged

by the G20 Leaders Declaration in June 2012, as well as part of a wider horizontal OECD project on gender equality. The OECD International Network on Financial Education (INFE) established a dedicated workstream in 2010 to address the needs of women for financial education under the support of the Russia/World Bank/OECD Trust Fund for financial literacy and education. Including international comparative analysis alongside national case studies, this volume offers a wealth of information on the new trends which have emerged over the past decades - all of which were discussed at the recent 9th International Symposium on Working Time, Paris (2004). It looks at the increasing use of results-based employment relationships for managers and professionals, and the increasing fragmentation of time to more closely tailor staffing needs to customer requirements (e.g., short-hours, part-time work). Moreover, as operating/opening hours rapidly expand toward a 24-hour and 7-day economy, the

book considers how this has resulted in a growing diversification, decentralization, and individualization of working hours, as well as an increasing tension between enterprises' business requirements and workers' needs and preferences regarding their hours. This new reality has raised some other challenging issues as well and the volume addresses those such as increasing employment insecurity and instability, time-related social inequalities, particularly in relation to gender, workers' ability to balance their paid work with their personal lives, and even the synchronization of working hours with social times, such as community activities.
