Health Informatics: An Interprofessional Approach was awarded first place in the 2013 AJN Book of the Year Awards in the Information Technology/ Informatics category. Get on the cutting edge of informatics with Health Informatics, An Interprofessional Approach. Covering a wide range of skills and systems, this unique title prepares you for work in today's technology-filled clinical field. Topics include clinical decision support, clinical documentation, provider order entry systems, system implementation, adoption issues, and more. Case studies, abstracts, and discussion questions enhance your understanding of these crucial areas of the clinical space. 31 chapters written by field experts give you the most current and accurate information on continually evolving subjects like evidence-

based practice, EHRs, PHRs, disaster recovery, and simulation. Case studies and attached discussion questions at the end of each chapter encourage higher level thinking that you can apply to real world experiences. Objectives, key terms and an abstract at the beginning of each chapter provide an overview of what each chapter will cover. Conclusion and Future Directions section at the end of each chapter reinforces topics and expands on how the topic will continue to evolve. Open-ended discussion questions at the end of each chapter enhance your understanding of the subject covered.

Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color

experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.

An Atlas for the 21st Century The most precise, cutting-edge images of normal spinal anatomy available today are the centerpiece of this spectacular atlas for

clinicians, trainees, and students in the neurologically-based medical specialties. Truly an atlas for the 21st century, this comprehensive visual reference presents a detailed overview of spinal anatomy acquired through the use of multiple imaging modalities and advanced techniques that allow visualization of structures not possible with conventional MRI or CT. A series of unique full-color structural images derived from 3D models based on actual images in the book further enhances understanding of spinal anatomy and spatial relationships. Written by two neuroradiologists who are also prominent educators, the atlas begins with a brief introduction to the development, organization, and function of the human

spine. What follows is more than 650 meticulously presented and labelled images acquired with the full complement of standard and advanced modalities currently used to visualize the human spine and adjacent structures including x-ray, fluoroscopy, MRI, CT, CTA, MRA, digital subtraction angiography, and ultrasound of the neonatal spine. The vast array of data that these modes of imaging provide offer a wider window into the spine and allow the reader an unobstructed view of the anatomy presented to inform clinical decisions or enhance understanding of this complex region. Additionally, various anatomic structures can be viewed from modality to modality and from multiple planes. This state-of-the-art atlas elevates conventional

anatomic spine topography to the cutting edge of technology. It will serve as an authoritative learning tool in the classroom, and as a crucial practical resource at the workstation or in the office or clinic. Key Features: Provides detailed views of anatomic structures within and around the human spine utilizing over 650 high quality images across a broad range of imaging modalities Contains several examples of the use of imaging anatomic landmarks in the performance of interventional spine procedures Contains extensively labeled images of all regions of the spine and adjacent areas that can be compared and contrasted across modalities Serves as an authoritative learning tool for students and trainees and practical reference for clinicians

looks at key questions about reforming political institutions, with contributed pieces written by top scholars specifically for the volume. Each pro or con essay considers a concrete proposal for reforming the political system. By focusing on institutions, rather than liberal or conservative public policies, students tend to leave behind ideology and grapple with claims and evidence to draw their own conclusions and build their own arguments. Students will explore how institutions work in their American government text, but this reader helps them to understand how they can be made to work better.

Photographer Jimmy Nelson has traveled

the world with his camera, visiting some of its most remote and ancient cultures: the resulting images will uplift us individually, unite us spiritually and celebrate our diversity yet common humanity. The new global language is not Chinese, English or Spanish. Jimmy Nelson believes it is the visual language of photography. His travels to visit native peoples within small remote communities have become addictive. The bright, colourful, ecstatic feeling that comes through in the resulting photographs is in sharp contrast to a world that sometimes feels emotionally beige. They demonstrate the unique beauty of all the varieties of human life for the viewers and the subjects alike. It is the story he wants to tell and share with the world. The parallels between

the biodiversity of the planet and its cultural diversity are very clear. Our ethnodiversity, our 'ethnosphere', must also be protected. It is the sum total and manifestation of all the thoughts, dreams, myths, ideas, inspirations and intuitions produced by the human imagination since the dawn of consciousness. It is all that we have created through our endeavours as a wildly inquisitive and astonishingly adaptive species. In short, it is humanity's greatest legacy. We all come from the same source and together we are going through an amazing period of cultural evolution. Peoples with unique cultural identities need to be truly and effectively respected, cherished and supported, for them and for all of us. If we are to do so we will all need

some of the humility, vulnerability, kindness, generosity and good humour that comes through in these arresting images. **E X P L O R E T H E C O M P A N I O N A P P A V R** viewer will be included with every copy of *Homage to Humanity*.
