This comparison, combined with an accompanying analysis of the curricular emphases, provides a picture of the differences in student performance that mark this study. Each of the studies examined content	achievement assessments; students' and teachers' beliefs and attitudes; and environmental characteristics of the classroom, school, and community. The Japanese test items tend to present the mathematics assessed in forms that are more verbally intensive, more focused on strategies for problem solving, and more involved than the mathematics forms used in the National Assessment of	Educational Progress. Sample test items, a content matrix for the U.S. test, and the framework for the Japanese test are included. Contains 29 references. This technical report

from the National Assessment of Educational Progress (NAEP) 1996 State Assessment Program in Mathematics presents fourth- and eighth-grade cross-state results of the NAEP 1996 State Assessment in mathematics. However, no interpretations of the data are included. This report does include the revised results from comparable assessments conducted in 1990 and 1992. These revisions were required due to errors in the procedures that were originally used to develop the NAEP mathematics scale and achievement levels. Eight chapters contain information on results for the nation in the context of content

strands and type of school, scale information by population subgroups, background information collected from students and teachers via interviews and questionnaires, and classroom practices related to mathematics instruction. (DDR)
