a d104-Book and a Work of Reference This volume comprises a course of lectures which were delivered by me before the students of the Medical Department of the University of the City of New York during the winter of 1880 and 1881. They are presented to the reading public, with few alterations, as they were originally reported for some of the medical journals, and for the private use of the author. The same colloquial style in which they were delivered has been retained, since it is believed that it will thus better fill the requirements of a text-book. I am well aware that the highest type of literary composition is not of this conversational character, and that it may be to some readers a drawback rather than an attractive feature in the volume; but the fact is also recognized that the best style, theoretically, is not always the clearest and the most forcible, and that successful teachers have often to sacrifice beauty of rhetoric in order to impart their knowledge.
