Command Line Interface Reference Guide R80 Re: 1400

Manual Cluster Failover. The actual simplest way to do so, is by using the priority in the SmartConsole, as it is centrally managed, that is where it should be, open the cluster object, Cluster members and adjust the priority and push the policy. For the quick switch the only way is to use the CLI as described in the previous posts.

Network connectivity is required if you will be using your Shop Management system on multiple computers. For network setups with access to the internet, a commercial firewall and antivirus application is highly recommended. We also recommend the services of a professional network administrator in configuring your network environment.
