Network analysis, architecture, and design have traditionally focused on capacity planning, which is over-engineering a network to provide an amount of capacity (also known as bandwidth) estimated to accommodate most short- and long-term traffic fluctuations over the life cycle of the design. The result is a bandwidth "buffer" that can handle these fluctuations.

1. The Art of Network Architecture: Applying Modularity By Denise Donohue, Russ White May 12, 2014 This chapter focuses on why we use specific design patterns to implement modularity, discussing specifically why we should use hierarchical design to create a modular network design, why we should use overlay networks to create virtualization, and the results of virtualization as a mechanism to ...
