Computer Networking : Principles, Protocols and Practice

Early computer networks used cable to connect computers together in a wired network. Most modern networks use wireless (wi-Fi) as the main connection media and networks tend to be a mixture of wired and wireless. The diagram below shows a wired Ethernet network. To work each device must be connected to a Ethernet hub or switch.

Networks can be wired or wireless with most networks being a mixture of both. Wired vs Wireless Networks. Early (pre 2008) networks were predominately wired. Today however most networks will use a mixture of wired and wireless network. Wired networks use Ethernet as the data link protocol. This is unlikely to change with the IOT, as IOT devices will be predominantly wireless.

The three most popular types of network for the home are wired, wireless and powerline. Wired home networks require all devices to be connected via Ethernet cables to your broadband router. This option is often best if your equipment is near the router. Your devices will require an Ethernet port, which rules out most smartphones and tablets.
