It is not enough for an instructor to merely present facts to their students; the presentation of information must be made accessible and understandable in the context of the student. As communication technologies become more widely available, traditional educational institutions are no longer the only source of information. What is now necessary is to reconsider what makes for meaningful education and apply those practices to digital natives. Revolutionizing Modern Education through Meaningful E-Learning Implementation evaluates the means by which online education can be improved and systematically integrated more fluidly into traditional learning settings, with special focus on the ethical, pedagogical, and design aspects of building online courses. This publication aims to elucidate the rewards and follies of online education for educators, administrators, programmers, designers, and students of education.

This book explores several branches of the social sciences and their perspectives regarding their relations with decision-making processes: computer science, education, linguistics, sociology, and management. The decision-making process in social contexts is based on the analysis of sound alternatives using evaluative criteria. Therefore, this process is one that can be rational or irrational, and can be based on knowledge and/or beliefs. A decision-making process always produces a final decision, which may or may not imply prompt action, and increases the chances of choosing the best possible alternative. The book is divided into four main parts. The concepts covered in the first part, on computer science, explore how the rise of algorithms and the growth in computing power over the years can influence decision-making processes. In the second part, some traditional and innovative ideas and methods used in education are presented: compulsory schooling, inclusive schools, higher education, etc. In turn, the third part focuses on linguistics aspects, and examines how progress is manifested in language. The fourth part, on sociology, explores how society can be influenced by social norms, human interactions, culture, and religion. Management, regarded as a science of the decision-making process, is explored in the last part of this book. Selected organizations' strategies, objectives and resources are presented, e.g., human resources, financial resources, and technological resources. The book gathers and presents, in a concise format, a broad range of aspects regarding the decision-making process in social contexts, making it a valuable and unique resource for the scientific community.
