NHS England » Neurological conditions

42 Neurological disorders: public health challenges 3.1 Dementia Dementia is a syndrome caused by disease of the brain, usually of a chronic or progressive nature, in which there is disturbance of multiple higher cortical functions, including memory, thinking, orientation, comprehension, calculation, learning capacity, language and judgement.

Public Health Principles and Neurological

Disorders ...

A neurological disorder is any disorder of the nervous system. Structural, biochemical or electrical abnormalities in the brain, spinal cord or other nerves can result in a range of symptoms. Examples of symptoms include paralysis, muscle weakness, poor coordination, loss of sensation, seizures, confusion, pain and altered levels of consciousness. There are many recognized neurological disorders ...

Neurological Disorders A Public Health

Neurology and

public health.

Neurology is the branch of medicine that deals with the nervous system.

Common neurological disorders include epilepsy, headache, Parkinson disease, and dementia, as well as neurological problems caused by other disorders, such as cerebrovascular disease and infections.

Hundreds of millions of people worldwide are affected by neurological disorders: more than 50 million people have

epilepsy; around 47 million are affected by dementia globally. Neurological Disorders Public Health Challenges Overview. The document provides the public health perspective for neurological disorders and presents fresh and updated estimates and predictions of the global burden borne by them. Separate sections discuss some of the most important disorders in detail: dementia, epilepsy, headache disorders, multiple sclerosis, neuroinfections,

neurological disorders associated with malnutrition, pain associated with neurological disorders, Parkinson's disease, stroke and traumatic brain injuries. *Neurological Disorders: Public Health Challenges - World ...* Neurological conditions such as Parkinson's disease, motor neurone disease, and epilepsy result from damage to the brain, spinal column or peripheral nerves. Some neurological conditions are life threatening, with

many severely affecting an individual's quality of life. **WHO | Neurology and public health** Neurological disorders: public health challenges describes and discusses the increasing global public health importance of common neurological disorders such as dementia, epilepsy, headache disorders, multiple sclerosis, neuroinfections, neurological disorders associated with malnutrition, pain associated with

neurological disorders, Parkinson's disease, stroke and traumatic brain injuries.
