Neuroscience (or neurobiology) is the scientific study of the nervous system. It is a multidisciplinary branch of biology that combines physiology, anatomy, molecular biology, developmental biology, cytology, mathematical modeling, and psychology to understand the fundamental and emergent properties of neurons and neural circuits. The understanding of the biological basis of learning, memory ...

Neurophysiology is a union
of both neurology and
physiology and it studies the
functioning of the nervous
system. The Journal of
Neurology and
Neurophysiology (JNN)

prioritizes the study of central
nervous system and its
function, connected to
translational science,
neurology, neurobiology,
psychology, neuroanatomy,
electrophysiology, cognitive
sciences and its relation to
brain sciences.

Scope: Neurosciences is an open
access, peer-reviewed, quarterly
publication. Authors are invited to
submit for publication articles
reporting original work related to
the nervous system, e.g.,
neurology, neurophysiology,
neuroradiology, neurosurgery,
neurorehabilitation,
neurooncology, neuropsychiatry,
and neurogenetics, etc. Basic
research with clear clinical
implications will also be
considered.

Neurophysiology is a diagnostic
specialty concerned with
recording and interpreting

electrical signals from the nervous system. It is important in the evaluation of peripheral nerve and brain function, often a key element in the diagnosis and assessment of diseases of the nervous system, such as epilepsy, muscle and peripheral nerve disease, sleep disorders or monitoring of nerve function.
