Unequal Motherhoods and the Adoption of Asian Children Rowman & Littlefield

In this important book, Nicholas Hartlep and Daniel Scott's detailed analyses on both visual and historical representations of Asian Americans in textbooks and teacher manuals used in our elementary and secondary schools poignantly tell us that generations of children are growing up being fed this single story about Asian Americans. As Hartlep and Scott write, Asian Americans have once again been constructed as the "good minority" that can succeed on their own and be used as a political instrument to shame the Blacks for their underachievement and their fight for equality. Over and over again, the media has been telling "a single story" about Asian Americans to the public for the past fifty years. The consequence of this fabricated story is that it "discourages others—even Asian-Americans themselves—from believing in the validity of their struggles" (Linshi, 2014, p. 1).

This book explores the ways to 'rethink', 'repackage' and 'rescue' world trade law in the post-COVID-19 era. Using the COVID-19 pandemic as an important context, the book makes original and critical contributions to the growing debate over a range of emerging challenges and systemic issues that might change the landscape of world trade law in the years to come. The book asks: do these unprecedented times and challenges call for reengineering the world trading system and a further retreat from trade liberalisation? The authors offer a rigorous and insightful analysis of whether and how the existing trade institutions and/or rules, including their latest developments, may provide room to deal with pandemic-induced trade-related issues, sustainable development goals, future crises and other existential threats to the multilateral trading system. The book reinforces the importance of international cooperation and the pressing need to reinvigorate the world trading system. The pandemic has provided a unique opportunity for governments to rebuild the political will needed for such cooperation. One should never let a serious crisis go to waste.

Although "democracy promotion" has become a popular term for policy makers and scholars, democratization is rarely a smooth or linear transition. While some countries quickly democratize, others lag behind despite a long period of democracy promotion activities. Furthermore, while democracy promotion itself has been widely studied, there is a paucity of literature available assessing the outcome or the impact of democracy promotion. This book investigates democracy promotion by the European Union and the United States of America, and seeks to uncover why intensive democracy promotion has resulted in limited democratic progress. Exploring case studies of Armenia, Azerbaijan, and Georgia, this book examines the conditions in which democracy promotion is more likely to result in democratic transformation. In addition, it introduces the concept of the "democracy blocker," a powerful authoritarian regional actor that is capable of blocking democratization in other countries. This book will be of interest to students and scholars of Political Science, Democracy, Democratization, EU Studies, US Politics, Comparative Politics, and Foreign Policy. Radical Care Educators often invoke the term care to describe why they entered the field and what compels them to continue. This book argues that care, as typically described and enacted, is not sufficient for leading schools, particularly those serving

Black and Brown children. Instead, school leaders need to embrace radical care. Drawing from 20 years of researching and working in New York City public schools, Rosa Rivera-McCutchen outlines the five components of radical care: adopting an antiracist stance, cultivating authentic relationships, believing in students' and teachers' capacity for excellence, leveraging power strategically, and embracing a spirit of radical hope. To demonstrate practical strategies, the author shares vignettes from her personal experiences that exemplify each of the components. Calling for today's school leaders to thoughtfully challenge existing structures that reproduce inequality, Radical Care offers a much-needed framework that will guide leadership practice with a sense of urgency and a spirit of hope. Book Features: Focuses on the school principal as critical catalyst for school transformation. Centers antiracism as essential to leadership practice. Includes practical strategies for navigating the sociopolitical and policy climate. Offers a roadmap for engaging teachers and staff in practicing radical care. Auerbach's Wilderness Medicine E-Book

As tech giants and startups disrupt every market, those who master large-scale software delivery will define the economic landscape of the 21st century, just as the masters of mass production defined the landscape in the 20th. Unfortunately, business and technology leaders are woefully ill-equipped to solve the problems posed by digital transformation. At the current rate of disruption, half of S&P 500 companies will be replaced in the next ten years. A new approach is needed. In Project to Product, Value Stream Network pioneer and technology business leader Dr. Mik Kersten introduces the Flow Framework—a new way of seeing, measuring, and managing software delivery. The Flow Framework will enable your company's evolution from project-oriented dinosaur to product-centric innovator that thrives in the Age of Software. If you're driving your organization's transformation at any level, this is the book for you.

Following the AHIMA standards for education for both two-year HIT programs and four-year HIA programs, Health Information: Management of a Strategic Resource, 4th Edition describes the deployment of information technology and your role as a HIM professional in the development of the electronic health record. It provides clear coverage of health information infrastructure and systems along with health care informatics including technology, applications, and security. Practical applications provide hands-on experience in abstracting and manipulating health information data. From well-known HIM experts Mervat Abdelhak, Sara S. Grostick, and Mary Alice Hanken, this book includes examples from diverse areas of health care delivery such as long-term care, public health, home health care, and ambulatory care. An e-book version makes it even easier to learn to manage and use health data electronically. A focus on the electronic health care record helps you learn electronic methods of organizing, maintaining, and abstracting from the patient health care record. Learning features include a chapter outline, key words, common abbreviations, and learning objectives at the beginning of each chapter, and references at the end. Unique! Availability in the e-book format helps you in researching, abstracting, and managing data electronically. A study guide on the companion Evolve website includes interactive exercises and cases containing real-life medical records, letting you apply what you've learned from the book and in the classroom. Evolve logos within the textbook connect the material to the Evolve website, tying together the textbook, student study guide and online resources. Awarded second place in the 2017 AJN Book of the Year Awards in the Information Technology category. See how information technology intersects with health care! Health Informatics: An Interprofessional Approach, 2nd Edition prepares you for success in today's technology-filled healthcare practice. Concise coverage includes information systems and applications such as electronic health records, clinical decision support, telehealth, ePatients, and social media tools, as well as system implementation. New to this edition are topics including data science and analytics,

mHealth, principles of project management, and contract negotiations. Written by expert informatics educators Ramona Nelson and Nancy Stagers, this edition enhances the book that won a 2013 American Journal of Nursing Book of the Year award! Experts from a wide range of health disciplines cover the latest on the interprofessional aspects of informatics — a key Quality and Safety Education for Nurses (QSEN) initiative and a growing specialty area in nursing. Case studies encourage higher-level thinking about how concepts apply to real-world nursing practice. Discussion questions challenge you to think critically and to visualize the future of health informatics. Objectives, key terms and an abstract at the beginning of each chapter provide an overview of what you will learn. Conclusion and Future Directions section at the end of each chapter describes how informatics will continue to evolve as healthcare moves to an interprofessional foundation. NEW! Updated chapters reflect the current and evolving practice of health informatics, using real-life healthcare examples to show how informatics applies to a wide range of topics and issues. NEW mHealth chapter discusses the use of mobile technology, a new method of health delivery — especially for urban or under-served populations — and describes the changing levels of responsibility for both patients and providers. NEW Data Science and Analytics in Healthcare chapter shows how Big Data — as well as analytics using data mining and knowledge discovery techniques — applies to healthcare. NEW Project Management Principles chapter discusses proven project management tools and techniques for coordinating all types of health informatics-related projects. NEW Contract Negotiations chapter describes strategic methods and tips for negotiating a contract with a healthcare IT vendor. NEW Legal Issues chapter explains how federal regulations and accreditation processes may impact the practice of health informatics. NEW HITECH Act chapter explains the regulations relating to health informatics in the Health Information Technology for Education and Clinical Health Act as well as the Meaningful Use and Medicare Access & CHIP Reauthorization Act of 2015.

The Cloud Adoption Playbook Elsevier Health Sciences

This book presents a committed quest to unravel and document the postwar adoption networks that placed more than 3,000 Greek children in the United States, in a movement accelerated by the aftermath of the Greek Civil War and by the new conditions of the global Cold War. Greek-to-American adoptions and, regrettably, also their transactions and transgressions, provided the blueprint for the first large-scale international adoptions, well before these became a mass phenomenon typically associated with Asian children. The story of these Greek postwar and Cold War adoptions, whose procedures ranged from legal to highly irregular, has never been told or analyzed before. Adoption, Memory, and Cold War Greece answers the important questions: How did these adoptions from Greece happen? Was there any money involved? Humanitarian rescue or kid pro quo? Or both? With sympathy and perseverance, Gonda Van Steen has filled a decades-long gap in our understanding, and provided essential information to the hundreds of adoptees and their descendants whose lives are still affected today.

So perfectly executed was the mission to rescue Capt. Scott O'Grady that it amazed even the men responsible. Just, five hours after radio contact was first made with Basher 52 - O'Grady's call sign - the Air Force captain was safely on board the USS Kearsarge. The downed F-16 fighter pilot's rescue from a Bosnian mountainside by Col. Martin Berndt's 24th Marine Expeditionary Unit electrified the nation in June 1995 and renewed many Americans' faith in the military. This book tells the story of the mission in the words of the men who commanded, planned, and carried it out. To get the inside account, Mary Pat Kelly traveled throughout Europe to conduct more than one hundred interviews, visiting U.S. ships and bases and UN posts in Croatia and Bosnia where participants were stationed. Adm. Leighton W. Smith Jr., commander in chief of U.S. naval forces in Europe and head of NATO forces in the Southern European theater, provides the framework with his day-to-day commentary on the efforts to find Captain O'Grady and a nearly minute-by-minute record of the rescue itself. In concert with Lt. Gen. Michael E. Ryan, commander of U.S. and NATO air forces, the admiral reveals the decision-making process that led to the "Good to Go" order. Readers then hear from the Tactical Recovery of Aircraft and Personnel (TRAP) team - the Navy and Marine Corps commanders, pilots, crew chiefs, and grunts who made it happen. Speaking for the Navy are Capt. Christopher Cole, skipper of the Kearsarge, Como. Jerome Schill, and their staffs, from the intelligence officers to the grapes who fueled the aircraft. Captain O'Grady puts his own experiences in the context of overall events.

The fifth volume of A History of the Book in America addresses the economic, social, and cultural shifts affecting print culture from World War II to the present. During this period factors such as the expansion of government, the growth of higher education, the climate of the Cold War, globalization, and the development of multimedia and digital technologies influenced the patterns of consolidation and diversification established earlier. The thirty-three contributors to the volume explore the evolution of the publishing industry and the business of bookselling. The histories of government publishing, law and policy, the periodical press, literary criticism, and reading--in settings such as schools, libraries, book clubs, self-help programs, and collectors' societies--receive imaginative scrutiny as well. The Enduring Book demonstrates that the corporate consolidations of the last half-century have left space for the independent publisher, that multiplicity continues to define American

print culture, and that even in the digital age, the book endures. Contributors: David Abrahamson, Northwestern University James L. Nursing and Informatics for the 21st Century - Embracing a Digital World, Book 1 Bloomsbury Publishing

Why is it so hard to make lasting changes in our companies, in our communities, and

in our own lives? The primary obstacle is a conflict that's built into our brains, say Chip and Dan Heath, authors of the critically acclaimed bestseller Made to Stick. Psychologists have discovered that our minds are ruled by two different systems - the rational mind and the emotional mind—that compete for control. The rational mind wants a great beach body; the emotional mind wants that Oreo cookie. The rational mind wants to change something at work; the emotional mind loves the comfort of the existing routine. This tension can doom a change effort - but if it is overcome, change can come quickly. In Switch, the Heaths show how everyday people - employees and managers, parents and nurses - have united both minds and, as a result, achieved dramatic results: • The lowly medical interns who managed to defeat an entrenched, decades-old medical practice that was endangering patients • The home-organizing guru who developed a simple technique for overcoming the dread of housekeeping • The manager who transformed a lackadaisical customer-support team into service zealots by removing a standard tool of customer service In a compelling, story-driven narrative, the Heaths bring together decades of counterintuitive research in psychology, sociology, and other fields to shed new light on how we can effect transformative change. Switch shows that successful changes follow a pattern, a pattern you can use to make the changes that matter to you, whether your interest is in changing the world or changing your waistline.

Flexible Incentives for the Adoption of Environmental Technologies in Agriculture identifies and structures more flexible economic incentives for the achievement of environmental goals in agriculture. It provides a conceptual framework and presents case studies that analyze how flexible incentives can address environmental problems that are caused by agricultural production. The book brings together economists, agency personnel and political economists for the purpose of exploring how new cutting-edge economic tools could be developed and applied to environmental problems. The goal of the book is to complement and to expand the economic theory of environmental regulation and technology adoption with new research findings. The key theme of this book is the important role technology takes when addressing environmental problems. New technologies and technical development are broadly defined to include economic instruments, innovative ways to communicate environmental information, new economic institutions, and education. This book is designed for public and private policymakers, government analysts, teachers, researchers and students who specialize in the fields of natural resources, agricultural economics and environmental regulation. It provides a fresh perspective on what types of incentives may be used to lead us to the desired environmental outcomes and offers new ideas about the types of economic instruments that may achieve these outcomes.
