**Solutions: Pre-Intermediate: Workbook** Springer  
The volume unites research and practice on integrating language learning, teaching and assessment at preschool and early school age. It includes chapters written by experts in the field who have studied some of the very youngest (pre-primary) children through to those up to the age of 12, in a variety of private and state contexts across Europe. The collection makes a much-needed contribution to the subject of appropriate assessment for children with the focus of many chapters being classroom-based assessment, particularly formative assessment, or the case for developing assessment skills in relation to even the youngest children. As a whole, the book provides useful case study insights for policymakers, teacher educators, researchers and postgraduate students with interest in or responsibility for how children are assessed in their language learning. It also provides practical ideas for practitioners who wish to implement greater integration of assessment and learning in their own contexts.

**Insight Upper Intermediate Workbook** Multilingual Matters  
This edited collection explores the processes of second language learning and teaching from a psycholinguistic perspective. Authored by leading experts in the field, the book includes studies focusing on theoretical, empirical and practical aspects of second and foreign language education. Part One offers contributions devoted to a range of learner-related factors, dealing with affective and cognitive variables, the process of reading and the acquisition of lexis. Part Two brings together papers related to teacher awareness of second language instruction that focus on conversational styles,

fostering intercultural pragmatics, teacher job satisfaction, the development of instructional materials and challenges of teacher training in different contexts. It is of interest to researchers as well as graduate and postgraduate students seeking fresh inspirations for their own empirical investigations of the ways in which second and foreign languages are taught and learned.

**Matura Solutions** Oxford University Press, USA  
A comprehensive account of the physical / mechanical behaviour of polyurethanes (PU s) elastomers, films and blends of variable crystallinity. Aspects covered include the elasticity and inelasticity of amorphous to crystalline PUs, in relation to their sensitivity to chemical and physical structure. A study is made of how aspects of the constitutive responses of PUs vary with composition: the polyaddition procedure, the hard segment, soft segment and chain extender (diols and diamines) are varied systematically in a large number of systems of model and novel crosslinked andthermoplastic PUs. Results will be related to: microstructural changes, on the basis of evidence from x-ray scattering (SAXS and WAXS), and also dynamic mechanical analyses (DMA), differential scanning calorimetry (DSC) and IR dichroism. Inelastic effects will be investigated also by including quantitative correlations between the magnitude of the Mullins effect and the fractional energy dissipation by hysteresis under cyclic straining, giving common relations approached by all the materials studied. A major structural feature explored is the relationship between the nature of the hard segment (crystallising or not) and that of the soft segments. Crystallinity has been sometimes observed in the commercial PUs hard phase but this is usually limited to only a few percent for most hard segment structures when solidified from the melt. One particular diisocyanate, 4,4 ' -dibenzyl diisocyanate (DBDI) that, in the presence of suitable chain extenders ( diols or diamines), gives rise to significant degrees of crystallinity [i-iii] and this is included in the present work. Understanding the reaction pathways involved, in resolving the subtle morphological evolution at the nanometre level, and capturing mathematically the complex, large-deformation nonlinear viscoelastic mechanical behaviour are assumed to bring new important insights in the world basic research in polyurethanes and towards applied industrial research in
