Children with nonverbal learning disabilities (NVLD) have needs that can take many forms and may, over time, require consultation and collaboration with professionals from several fields. Given that multiple specialists may be involved in working with children with NVLD – as well as the array of treatment variables – even seasoned practitioners may find themselves in confusing situations. Treating NVLD in Children takes a developmental view of how the problems and needs of young people with nonverbal learning disabilities evolve and offers a concise guide for professionals who are likely to contribute to treatment. Expert practitioners across specialties in psychology, education, and rehabilitative therapy explain their roles in treatment, the decisions they are called on to make, and their interactions with other professionals. Collaborative interventions and teamwork are emphasized, as are transitions to higher learning, employment, and the adult world. Among the book's key features are: A new four-subtype model of NVLD, with supporting research. A brief guide to assessment, transmitting results, and treatment planning. Chapters detailing the work of psychologists, therapists, coaches, and others in helping children with NVLD. Material specific to improving reading, writing, and mathematics. Overview of issues in emotional competency and independent living. An instructive personal account of growing up with NVLD. Treating NVLD in Children: Professional Collaborations for Positive Outcomes is a key resource for a wide range of professionals working with children, including school and clinical child psychologists; educational psychologists and therapists; pediatricians; social workers and school counselors; speech and language therapists; child and adolescent psychiatrists; and marriage and family therapists. Technically it was a minor league, but for hockey fans west of the Mississippi, the Western Hockey League provided major-league entertainment for over 25 years. The WHL was a determined and ambitious professional league, with some 22 teams based in major American and Canadian cities. Known as the Pacific Coast Hockey League prior to 1952, the WHL aspired to establish itself as North America's second major league, a western counterpart to the early eastern Canada-based National Hockey League. But it never quite managed to make the jump to the majors. Ice Warriors is a play-by-play history of the Western Hockey League, recalling the league's beginnings as the Pacific Coast League, how it came to rival the NHL and what led to its disbanding in 1974. By interviewing former players, coaches and fans, and examining statistical records, Jon C. Stott captures the WHL's glory days and pays tribute to a time when hockey was played with heart. The international New Math developments between about 1950 through 1980, are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century. It attracted the attention of local and international politicians, of teachers, and of parents, and influenced the teaching and learning of mathematics at all levels—kindergarten to college graduate—in many nations. After garnering much initial support it began to attract criticism. But, as Bill Jacob and the late Jerry Becker show in Chapter 17, some of the effects became entrenched. This volume, edited by Professor Dirk De Bock, of Belgium, provides an outstanding overview of the New Math/modern mathematics movement. Chapter authors provide exceptionally high-quality analyses of the rise of the movement, and of subsequent developments, within a range of nations. The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America. The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians, who since the 1930s had published under the name of (a fictitious) “ Nicolas Bourbaki. ” In the United States, there emerged, during the 1950s various attempts to improve U.S. mathematics curricula and teaching, especially in secondary schools and colleges. This side of the story climaxed in 1957 when the Soviet Union succeeded in launching “ Sputnik, ” the first satellite. Undoubtedly, this is a landmark publication in education. The foreword was written by Professor Bob Moon, one of a few other scholars to have written on the New Math from an international perspective. The final “ epilogue ” chapter, by Professor Geert Vanpaemel, a historian, draws together the overall thrust of the volume, and makes links with the general history of curriculum development, especially in science education, including recent globalization trends.

Based on a broad range of case studies, Organization and Management Problem Solving is an insightful text designed to improve the application of organization theory and systems thinking in teaching and practice. This book illustrates the five key themes in the nature of organization and management: technical, structural, psychosocial, managerial, and cultural through the analysis of measured incidents tested by students. A clear theoretical framework supports the case studies, allowing the text to have practical relevance to contemporary settings and to be recognized as a model for describing, analyzing, and responding to organization and management problems. The model integrates the thinking of many writers on organization and problem solving including Ackoff, Blake, and Mouton; Schein, Kast, and Rosenzweig; and Mitroff and Lippitt. The approach eliminates causal conditions and emphasizes responsive problem solving. Theory is applied and expanded as needed to a broader social context, engaging the reader in a thorough understanding of the nature and development of organization theory and problem solving. This book is relevant to consultants, academics, and professional managers in a number of settings (academic, military, business organizations, and research institutes) and disciplines (including development and change, management, human resources, social psychology, communication, sociology, and psychology).
