“This is a book for every thinking person, the perfect antidote to today’s culture wars.”—Hope

Jahren The creators of An Illustrated Book of Bad Arguments return with this desperately timely guide to how words can trick us. Learn to “hear” hidden bias, slant, and spin—from an irresistible cast of woodland creatures! Public discourse? More like public discord.

The battle cries of our culture wars are rife with “loaded language”—be it bias, slant, or spin. But listen closely, or you’ll miss what Ali Almassawi finds more frightening still: words that erase accountability, history, even identity through

Donald A. Barclay, a career librarian who has spent decades teaching university students to become information literate scholars and citizens, takes an objective, non-partisan approach to the complex and nuanced topic of

sorting deceptive information from trustworthy information. An Introduction to Logic Seven Stories Press A visual guide to the way the world really works Every day, every hour, every minute we are bombarded by information - from television, from newspapers, from the internet, we're steeped in it, maybe even lost in it. We need a new way to relate

to it, to discover the beauty and the fun of information for information's sake. No dry facts, theories or statistics. Instead, Information is Beautiful contains visually stunning displays of information that blend the facts with their connections, their context and their relationships - making information meaningful, entertaining and beautiful.

The Structure of Argument  
HarperCollins UK  
Everyone has heard of the term "pseudoscience",

typically used to describe something that looks like science, but is somehow false, misleading, or unproven. Many would be able to agree on a list of things that fall under its umbrella-- astrology, phrenology, UFOlogy, creationism, and eugenics might come to mind. But defining what makes these fields "pseudo" is a far more complex issue. It has proved impossible to come up with a simple criterion that enables us to differentiate pseudoscience from genuine science. Given the virulence of contemporary disputes over the denial of climate change and anti-vaccination movements--both of which display

allegations of "pseudoscience" on all sides-- there is a clear need to better understand issues of scientific demarcation. On the Fringe explores the philosophical and historical attempts to address this problem of demarcation. This book argues that by understanding doctrines that are often seen as antithetical to science, we can learn a great deal about how science operated in the past and does today. This exploration raises several questions: How does a doctrine become demonized as pseudoscientific? Who has the authority to make these pronouncements? How is the status of science shaped by political or cultural

---

contexts? How does pseudoscience differ from scientific fraud? Michael D. Gordin both answers these questions and guides readers along a bewildering array of marginalized doctrines, looking at parapsychology (ESP), Lysenkoism, scientific racism, and alchemy, among others, to better understand the struggle to define what science is and is not, and how the controversies have shifted over the centuries. On the Fringe provides a historical tour through many of these fringe fields in order to provide tools to think deeply about scientific controversies both in the past and in our present.

**We Need to Talk** New

Society Publishers An important and compelling book on the viral dissemination of misinformation in today's world. We are being swamped with dangerous nonsense. From 9/11 conspiracy theories to Holocaust denial to alternative medicine, we are all experiencing an epidemic of demonstrably untrue descriptions

of the world. For Damian Thompson, the misinformation industry is wreaking havoc on the once-lauded virtues of science and reason. Unproven theories and spurious claims are forms of "counterknowledge," and, helped by the Internet, they are creating a global generation of misguided adherents who repeat these untruths and lend them credence.

---

Thompson explores our readiness to accept falsehoods and the viral role of technology in spreading quack remedies, pseudo-history, and creationist fanaticism. Following in the footsteps of Richard Dawkins's *The God Delusion*, Sam Harris's *The End of Faith*, and Christopher Hitchens's *God Is Not Great*, Counte rknowledge is a brilliant defense of

scientific proof in an age of fabrication. **The Politics of News Choice** Springer Nature A prescient warning of a future we now inhabit, where fake news stories and Internet conspiracy theories play to a disaffected American populace "A glorious book . . . How the new conspiracist s are undermining democracy—and what can be done about it  
Conspiracy theories are as old as politics. But conspiracists today have introduced something new—conspiracy without theory. And the new conspiracism has moved

---

from the fringes to the heart of government with the election of Donald Trump. In *A Lot of People Are Saying*, Russell Muirhead and Nancy Rosenblum show how the new conspiracism differs from classic conspiracy theory, how it undermines democracy, and what needs to be done to resist it. *Fake News, Propaganda, and Plain Old Lies* independently published The Black Swan is a standalone book in Nassim Nicholas Taleb's landmark *Incerto* series, an investigation of opacity, luck, uncertainty, probability, human error, risk, and decision-making in a world we don't understand. Award in Relationship s & Communication "We Need to Talk is an important read for a conversational-ly-challenged, disconnected age. Headlee is a talented, honest storyteller, and her advice has helped me become a better spouse, friend, and mother." (Jessica Lahey, author of

---

New York Times bestseller The Gift of Failure) Today most of us communicate from behind electronic screens, and studies show that Americans feel less connected and more divided than ever before. The blame for some of this disconnect can be attributed to our political landscape, but the erosion of our conversational skills as a society lies with us as individuals. And the only way forward, says Headlee, is to start talking to each other. In We Need to Talk, she outlines the strategies that have made her a better conversationalist—and offers simple tools that can improve anyone's communication. For example: BE THERE OR GO ELSEWHERE. Human beings are incapable of multitasking, and this is especially true of tasks that involve language.
