Determined to Survive Sky & Telescope

In riveting detail, Max Steinmetz, Holocaust survivor, describes the journey from growing up in a small, Transylvania, Romanian town to the horrors of the Saszregen ghetto, Auschwitz-Birkenau camp and killing center, Dachau concentration camp, slave labor sub-camps, a death march, and liberation by American soldiers. The story does not end there, as Steinmetz recounts the challenges and difficulties of rebuilding his life after the trauma and devastation of the Holocaust, and eventually coming to a place of being able to talk and share about his experiences. With a passion for Holocaust Education, Steinmetz and author, public high school teacher, Amy McDonald, work together to provide a factual, yet gripping emotional account of one survivor amidst the enormous and complex history of the Holocaust. As the time quickly approaches when there will be no living witnesses of the Holocaust, personal testimonies and historical accounts such as these become increasingly vital to ensuring that the lessons of the Holocaust and the legacies of its survivors are not forgotten.

This book presents the comprehensive description of basic principles, methodologies, similarities and differences of nanoliposomes and -phytosomes. It focuses on the implications of these nano carriers in drug delivery and also includes detailed classification of nanoionized drug particles, polymeric nanoparticles and hydrophobic nanoparticles. This book concludes with the biological, technical and study-design challenges of Nanopharmaceuticals and presents critical viewpoints of smart DNA nanostructures. The risk factors and regulatory concerns have also been kept in focus and the book includes the toxicity and application of different types of ionic liquids for humans and environment. It also critically describes characteristics, applications and regulatory gaps of nanoparticle-ionic liquid combined systems.

Put Options Taylor & Francis

In 1841, Solomon Northup was a free black man, married with three children and living in upstate New York, when he was tricked into going to Washington DC. There, he was drugged, kidnapped, and sold into slavery, eventually ending up on a plantation in the Red River area of Louisiana. For twelve years he experienced and witnessed the arbitrary beatings and whippings, around-the-clock back-breaking work, and countless other degradations that came with being enslaved in the antebellum south. Through the sympathetic ear of a white man and with miraculous timing, he was eventually freed and returned home. He then wrote this memoir and contributed to the abolitionist movement before disappearing from the pages of history. Like *Incidents in the Life of a Slave Girl*, *Twelve Years a Slave* stands in stark contrast to the era's bucolic propaganda that the enslaved in the south were well treated, well provided for, and made "part of the family." As a first-hand account, it exposes slavery for what it is: barbaric, dehumanizing, and evil.

Classic telescopes are of interest to amateur astronomers for a variety of reasons. There are the dedicated collectors, but there are also many amateurs who love the nostalgia they inspire. These telescopes "feel" different from any contemporary telescope and perhaps have a unique ability to reconnect the owner to a bygone age of craftsmanship. This book takes a look at traditional telescopes built by the great instrument makers of the 18th and 19th centuries, particularly the dynastic telescope makers, including Dollond, Alvan Clark, Thomas Cooke & Sons, and Carl Zeiss. Also included are lesser luminaries such as John Brashear, John Calver, William Wray, Henry Fitz, and William Henry Mogy. 'Classic Telescopes' covers the key features of the telescopes designed by these manufacturers, and shows how a heady combination of market trends, instrument condition, and pedigree will dictate their prices at auction. 'Classic Telescopes' also shows the reader how to find real bargains! Interviews with top classic telescope collectors (and users) provide the best tips of prospecting for a genuine acquisition.

Security Owner's Stock Guide Rockridge Press

In 1962, boxing writers and fans considered Cassius Clay an obnoxious self-promoter, and few believed that he would become the heavyweight champion of the world. But Malcolm X, the most famous minister in the Nation of Islam—a sect many white Americans deemed a hate cult—saw the potential in Clay, not just for boxing greatness, but as a means of spreading the Nation's message. The two became fast friends, keeping their interactions secret from the press for fear of jeopardizing Clay's career. Clay began living a double life—a patriotic "good Negro" in public, and a radical reformer behind the scenes. Soon, however, their friendship would sour, with disastrous and far-reaching consequences. Based on previously untapped sources, from Malcolm's personal papers to FBI records, *Blood Brothers* is the first book to offer an in-depth portrait of this complex bond. Acclaimed historians Randy Roberts and Johnny Smith reconstruct the worlds that shaped Malcolm and Clay, from the boxing arenas and mosques, to postwar New York and civil rights-era Miami. In an impressively detailed account, they reveal how Malcolm

molded Cassius Clay into Muhammad Ali, helping him become an international symbol of black pride and black independence. Yet when Malcolm was barred from the Nation for criticizing the philandering of its leader, Elijah Muhammad, Ali turned his back on Malcolm—a choice that tragically contributed to the latter's assassination in February 1965. Malcolm's death marked the end of a critical phase of the civil rights movement, but the legacy of his friendship with Ali has endured. We inhabit a new era where the roles of entertainer and activist, of sports and politics, are more entwined than ever before. *Blood Brothers* is the story of how Ali redefined what it means to be a black athlete in America—after Malcolm first enlightened him. An extraordinary narrative of love and deep affection, as well as deceit, betrayal, and violence, this story is a window into the public and private lives of two of our greatest national icons, and the tumultuous period in American history that they helped to shape.

In 2018, the National Academies of Sciences, Engineering, and Medicine issued an Interim Report evaluating the general viability of the U.S. Department of Energy's National Nuclear Security Administration's (DOE-NNSA's) conceptual plans for disposing of 34 metric tons (MT) of surplus plutonium in the Waste Isolation Pilot Plant (WIPP), a deep geologic repository near Carlsbad, New Mexico. It provided a preliminary assessment of the general viability of DOE-NNSA's conceptual plans, focused on some of the barriers to their implementation. This final report addresses the remaining issues and echoes the recommendations from the interim study.
