Nexus is an aspiring techno-thriller written by "professional technologist," Ramez Naam.

Naam has done his research on AI (his day job), has nearly twenty patents under his name, and has written widely on post-human topics, most notably

More Than Human Embracing the Promise of Biological Enhancement. So this guy knows his stuff.

...

Ramez Naam is a supporter for transhumanism, and this book (this trilogy) perfectly embodies that goal. The world in Nexus is set in approx 2040 where such technologies could exist that 'enhance the human condition'. This

isn't just a fictional novel but a possible extrapolation given today's technological feats and engineering.

The Nexus Trilogy is a postcyberpunk thriller novel trilogy written by American author Ramez Naam and published between 2012-2015. The novel series follows the protagonist Kaden Lane, a scientist who works on an experimental nano-drug, Nexus, which allows the brain to be programmed and networked, connecting human minds together. As he pursues his work,

he becomes entangled in government and corporate intrigue.

Nexus allows users

to connect to others' minds -- but Nexus 5 is a much more powerful and versatile tool.

Essentially, it allows for software to be 'run' on it, so it can be adapted -- programmed. It is also permanent (unlike the original Nexus, which, like a drug, wears off).

This is the

premise of Ramez Naam's brilliant science fiction trilogy. In Nexus, the first of the three novels, Naam explores the circumstances in which the conflict between humans and post-humans emerges into the open. Although the book is unquestionably imaginative, it is far from fantasy.
