There is no doubt that behavioral economics is becoming a dominant lens through which we think about economics. Behavioral economics is not a single school of thought but representative of a

range of approaches, and uniquely, this volume presents an overview of them. The wide spectrum of international contributors each provides an exploration of a central approach, aspect or topic in behavioral economics. Taken together, the whole volume provides a comprehensive overview of the subject which considers both key developments and future possibilities. As shown in the case of Attila the Hun, and his thirst for power, property, and personal prestige, nation states throughout the

world, particularly in Asia and Europe, have, since ancient times, been vulnerable to invasion by other nation states and bands of looters from outside their borders.

Terrorism's progress into the modern day has caused extreme concern among members of the international community, who now accept that it is like a cancer that refuses to localize itself within any single organ of the body, but seeks to spread its lethality throughout, even if that means

destroying itself along with the host. The fight against terrorism is long and complex, but the end is known in advance. Terrorists are defending a lost cause, and their defeat is inevitable, and democracy, freedom, and diplomacy will triumph.
