This Guide provides information on special topics that affect the fire safety performance of very tall buildings, their occupants and first responders during a fire. This Guide addresses these topics as part of the overall building design process using performance-based fire protection engineering concepts as described in the SFPE Engineering Guide to Performance Based Fire Protection. This Guide is not intended to be a recommended practice or a document that is suitable for adoption as a code. The Guide pertains to "super tall," "very tall" and "tall" buildings. Throughout this Guide, all such buildings are called "very tall buildings." These buildings are characterized by heights that impose fire protection challenges; they require special attention beyond the protection features typically provided by traditional fire protection methods. This Guide does not establish a definition of buildings that fall within the scope of this document.

The 2006 provides modern, up-to-date fire code, and addresses conditions hazardous to life and property from fire, explosion, handling or use of hazardous materials, and the use and occupancy of buildings and premises. Prescriptive- and performance-based approaches to fire prevention and fire protection systems are emphasized. Topics addressed include fire department access, fire hydrants, automatic sprinkler systems, fire alarm systems, hazardous materials storage and use, and fire safety requirements for new and existing buildings and premises. The 2006 edition is fully compatible with all the International Codes published by the International Code Council (ICC).

The EOD Handbook is a hardcover, bound, two-volume set of over 1,300 pages covering nearly 2,000 questions on over 585 topics that are relevant to automatic fire sprinkler systems, standpipes, water supplies, inspection, testing and maintenance, codes, and standards. The questions were asked by NFSA members from 2004-2018 and answered by NFSA's subject matter experts through the Expert of the Day (EOD) program and published in a members-only monthly publication called TechNotes. The questions and answers in this latest NFSA publication covers every installation standard such as NFPA 13, NFPA 13R, NFPA 13D, NFPA 20, inspection, testing, and maintenance standards such as NFPA 25, fire pumps and water supplies in NFPA 20 and NFPA 24, model fire, building, and life safety codes such as the International Building Code (IBC) and NFPA 101, and many more. NFSA subject matter experts represent a broad range of fire sprinkler knowledge and representation in the industry. The NFSA employs professional engineers, NICET certified in water-based layout technicians, NICET certified in inspection and testing, master code professionals and certified building officials experienced in fire sprinkler systems.

Fire Protection Approaches in Site Plan Review

Although effective fire sprinkler systems are crucial to public safety, for years, the designers of those systems had few published resources to reference and guide them through their design processes. The first edition of this book changed all that, and now The Design and Layout of Fire Sprinkler Systems Second Edition suits their needs even better.

Written and thoroughly updated by a fire prevention engineer with more than 20 years of experience, this book provides a complete, systematic introduction to automatic fire sprinkler design and layout, from design basics, code requirements, and pipe hanging to hydraulic calculations, retrofits, and details on fire pumps. The author carefully outlines all of a designer's responsibilities and includes an entire chapter dedicated to preparing for the NICET exam. More than 150 sample diagrams, checklists, sample forms, spec sheets, photographs, and a glossary complement the text, and the larger page size of this edition permits clear presentation of diagrams and schematics. The Design and Layout of Fire Sprinkler Systems not only builds the foundation and skills of newcomers to the field, but also provides an outstanding reference for fire safety professionals, building inspectors, insurance underwriters, and municipal officials.
