Adam Kay, author of *This is Going to Hurt* A BBC Radio 4 A Good Read choice This is a story about the cutting-edge medicine that has saved a generation of babies. It's about the love and fear a parent feels for a child they haven't yet met. It's about doctors, mothers, fathers and babies as together they fight for the first breath. *The First Breath* is a book about motherhood and medicine. Olivia Gordon decided to find out how, exactly, modern science saved her son's life. Crossing medical

memoir with popular science, *The First Breath* is an investigation into the pioneering fetal and neonatal care bringing a new generation into the world, who would not have lived if they had been born only a few decades ago. *The First Breath* explores the female experience of medicine and details the relationship mothers develop with doctors who hold not only life and death in their hands, but also the very possibility of birth. From the dawn of fetal medicine to neonatal surgery

and the exploding field of perinatal genetics, *The First Breath* tells of fear, bravery and love. Olivia Gordon takes the reader behind the closed doors of the fetal and neonatal intensive care units, resuscitation rooms and operating theatres at some of the world's leading children's hospitals, unveiling the untold story of how doctors save the sickest babies.

A micro-preemie fights for survival in this extraordinary

and gorgeously told memoir by her parents, both award-winning journalists. Juniper French was born four months early, at 23 weeks' gestation. She weighed 1 pound, 4 ounces, and her twiggy body was the length of a Barbie doll. Her head was smaller than a tennis ball, her skin was nearly translucent, and through her chest you could see her flickering heart. Babies like Juniper, born at the edge of viability, trigger the question: Which is the greater act of love -- to save her, or to let her go? Kelley

and Thomas French chose to fight for Juniper's life, and this is their incredible tale. In one exquisite memoir, the authors explore the border between what is possible and what is right. They marvel at the science that conceived and sustained their daughter and the love that made the difference. They probe the bond between a mother and a baby, between a husband and a wife. They trace the journey of their family from its fragile beginning to the miraculous survival of their now thriving daughter.
